1 Overview

Type Wizard is a turn-based rogue-lite in which the player is a wizard and the keyboard is the spellbook: every attack and every defence is typed.

Key facts

- **Genre:** turn-based rogue-lite with typing-based combat.
- **Platform:** PC, played with the keyboard.
- **Player character:** one wizard who uses three elements, Ember, Water and Shock.

Pillars

- **Type to attack:** choose an element, type up to 3 words to cast a skill, then type the target's name.
- **Type to defend:** when an enemy attacks, time slows down; type 1 word to dodge, or risk a second word to parry and strike back.
- **Grow every run:** choose a path on the map, buy skills and potions during the run, and keep permanent upgrades in the Hub.

Core loop

Hub (upgrade and prepare) → **Map** (choose a path) → **Encounters** (earn currencies) → **Altar and Trader** (spend Spirit Letters) → **Boss** → back to the Hub.

Spirit Letters are lost when the run ends; Shards and Potion Ingredients are kept for the Hub, but dying loses part of those earned during the run.

Early access scope

Content	In early access
Stages	1 full stage: a hand-made map with fights, Traders, Altars and a rotating boss
Enemies	3 types, 1 attack each
Bosses	3, 2 attacks each
Skills	30 (10 per element)
Potions	3
Hub stations	4

Beyond early access (for reference only, not in scope): runs that span several stages, each ending with a boss; new enemies, skills, status effects and wizards; controller support.

References

- **The Typing of the Dead:** typing as the core of combat.
- **Clair Obscur: Expedition 33:** turn-based fights with real-time dodge and parry.
- **Slay the Spire:** branching map and rogue-lite run structure.
- **Shroom and Gloom:** art style, tone and creature design.

2 Nomenclature

Term	Meaning
Skill (or spell)	An ability the player casts by typing its words. Each skill belongs to an element.
Element	Ember, Water or Shock. Each element has its own skill tree, its own page in the Grimoire and its own crystal in the Incantation Crystals' Stand. All three names are 5 letters long, so choosing any element by typing takes the same effort.

Term	Meaning
Skill tree	The 10 skills of an element: 1 root skill, 3 branch skills and 6 final skills (see 4 Skills).
Word	A word typed by the player. Casting a skill takes up to 3 words, one for each level of the skill tree; defending takes up to 2 words.
Squad	The group of enemies in a fight. It has its own name, which the player types to target AOE skills.
Run	One attempt, from leaving the Hub to defeating the boss or dying.
Stage	One map that ends with a boss. Early access has one stage.
Hub	The wizard's study, where permanent upgrades are bought between runs.
Encounter	A fight against basic enemies on the map.
Currencies	Spirit Letters, Shards and Potion Ingredients (see 8.1 Currencies).
Status effect	A temporary effect on a character (see 5 Status effects).
Dodge / parry	The two ways to avoid an enemy attack (see 3.3 Defence).

3 Combat

Combat is turn-based, but the player is always at the centre of the action: both attacking and defending are done by typing words before a timer runs out.

3.1 Turn order

- Every character (player, enemies, bosses) has a **Speed** value and waits 100 / Speed time units between two turns, so faster characters act more often. Example: a Golem (Speed 16) takes about 1.6 turns for each turn of a player with Speed 10.
- At the start of a fight every character acts once, from fastest to slowest; on a tie the player goes first.
- A turn order bar at the top of the screen shows the next 6 turns. Speed up, the Speed potion and Freeze change the order as soon as they are applied.
- The fight is won when every enemy is defeated; if the player's health reaches 0, the run ends.
- Health is not restored between fights: only skills, potions and the Trader's health refills restore it.

> Numbers: H.1 Character stats · H.3 Enemy and boss stats

3.2 Attack

On their turn the player casts one skill in three typed steps:

- **1. Choose the element:** type Ember, Water or Shock and press [Enter]. There is no timer, and potions can be used here. [Shift] zooms in on the page.
- **2. Cast:** a timer starts. Type up to 3 words, in order: root → branch → final skill. The last completed word decides the skill; more words mean more power. A wrong letter must be erased with [Backspace].
- **3. Choose the target:** a second timer starts. Type an enemy's name, the player's own name or, for AOE skills, the squad name. A wrong or missing name hits a random target, the player included.

Words completed when the cast timer ends	Result
0	The cast fails and the turn is lost
1	Root skill at minimum power (e.g. Ignis)

Words completed when the cast timer ends	Result
2	Branch skill at medium power (e.g. Ball)
3	Final skill at maximum power (e.g. Meteor); the casting phase ends at once

A word that is started but not finished never counts. Once the casting phase starts, the player cannot go back to the element choice.

> In detail: A.1 Attack (all rules, scenarios and feedback) · Screens: Skill tree selection, Zoom in, Cast, Target selection · Timers: H.1 Character stats

3.3 Defence

When an enemy attacks, time slows down and two words appear. The player types them before the attack's timer ends:

Words typed	Result
0, or 1 and ½ (parry started but not finished)	The player takes the attack's damage
1, then stop ([Enter] or wait)	**Dodge:** no damage
2	**Parry:** no damage, and 50% of the attack's damage (up to 100% with upgrades) hits the attacker

- Typing any letter after the first word gives up the dodge: the player must then complete the parry.
- Slow attacks give more time but longer words; fast attacks give less time and shorter words.

> In detail: A.2 Defence · Screen: Defence · Numbers: H.3 Enemy and boss stats, H.1 Character stats (parry upgrades)

4 Skills

Each element has a skill tree of 10 skills: 1 root skill, 3 branch skills and 6 final skills. Each branch has a role: single target damage, AOE damage or buff/debuff. Final skills marked with a status effect also charge that effect.

Element	Root (1 word)	Single target	AOE	Buff / debuff
Ember	Ignis	Ball → Meteor, Explosion (Burn)	Lava → Lapillus, Puddle (Burn)	Aura → Inside, Melting
Water	Hydro	Jet → Boiling, Freezing (Freeze)	Wave → Tsunami, Iceberg (Freeze)	Well → Remedial, Infected
Shock	Fulgur	Bolt → Impact, Discharge (Overcharge)	Wire → Overflow, Conduit (Overcharge)	Load → Energy, Negative

- Before a run the player picks 1 final skill per element in the Grimoire (more with the Slots upgrade) and can cast its whole path; more skills can be bought at Altars.
- Skills are unlocked and levelled up in the Hub, in the Incantation Crystals' Stand.

> In detail: B Skill list (every skill's effect) · Unlocks: F.4 Incantation Crystals' Stand · Numbers: H.2 Skill values and costs

5 Status effects

- **Charged effects** (Burn, Freeze, Overcharge) come from some damage skills, which add a percentage of charge to the target (see 6 Element resistance). At 100% charge the effect activates.
- **Buffs and debuffs** activate as soon as their skill is cast.
- An active effect cannot be recharged or stacked, but different effects can be active on the same target at the same time.

Effect	What it does (level 1)	Applied by
Burn	10 damage at the start of each of the target's turns, for 3 turns	Explosion, Puddle (charged)
Freeze	The target cannot move or attack for 2 turns	Freezing, Iceberg (charged)
Overcharge	25% of the damage the target takes spreads to its squad, for 2 turns	Discharge, Conduit (charged)
Powerful	+50% attack power	Aura, Inside
Defenceless	The target takes 50% more damage (resistances still apply)	Melting
Regen	+30 health at the start of every turn	Remedial
Weakness	The target deals 30% less damage	Infected
Speed up	More Speed (25% with Load, 75% with Energy), so more frequent turns	Load, Energy
Vulnerable	Element resistances reduced by 50% (at 100% they are removed)	Negative

Upgraded potions can also apply weaker versions: Potion Regen, Potion Powerful and Potion Speed Up (see 7 Potions).

In detail: C Status effects (rules, potion versions, feedback) · Numbers: H.2 Skill values and costs

6 Element resistance

Every enemy has an element. The element of the skill that hits it changes the damage and the status charge:

Matchup	Damage	Status charge, single target	Status charge, AOE
Effective	130%	60%	40%
Neutral	100%	50%	30%
Resistant	70%	30%	10%
Skill element ↓ / enemy element →	Ember	Water	Shock
Ember	Neutral	Resistant	Effective
Water	Effective	Neutral	Resistant
Shock	Resistant	Effective	Neutral

In short: Water beats Ember, Shock beats Water, Ember beats Shock. The player has no element: enemy attacks always deal neutral damage to the player.

Enemy elements: 8.2 The run, D Enemies and bosses

7 Potions

- Using a potion does not cost the turn. Potions are used while choosing the element, before the casting phase: the player types the potion's name and presses [Enter].
- Each type of potion can be used only once per turn.
- The player carries a limited number of potions (3 sockets at the start), chosen and upgraded in the Hub. With free sockets, more can be bought from the Wandering Trader during the run.

Potion	Effect at level 1	Alchemy Lab upgrades
Health potion	Instantly gives 30 health to the player	More healing; adds Potion Regen; bigger Trader stock
Power potion	Applies Powerful (30% instead of 50%) for the current turn	Bigger boost; adds Potion Powerful; bigger Trader stock
Speed potion	A one-time Speed boost (+20) for the next turn, so it comes sooner	Bigger boost; adds Potion Speed Up; bigger Trader stock

> In detail: F.3 Potion belt, F.5 Alchemy Lab · Numbers: H.7 Potion upgrades and costs · Screen: Potion belt selection

8 Progression

In early access a run is a single stage: the player crosses the map, defeats the boss and returns to the Hub (beyond early access, defeating a boss will lead to the next stage). Power-ups gathered during a run are lost when it ends; upgrades bought in the Hub are permanent.

8.1 Currencies

Currency	Earned from	Spent on	When the run ends
Spirit Letters	Encounters	Wandering Trader and Altar	Reset to the starting value (upgradable in the Hub)
Shards	Encounters, bosses, Trader pouches	Incantation Crystals' Stand: skills and character stats	Kept; on death, part of what was earned in the run is lost
Potion Ingredients	Encounters, bosses, Trader pouches	Alchemy Lab: potion upgrades and potion belt sockets	Kept; on death, part of what was earned in the run is lost

> Numbers: H.4 Encounter rewards, H.6 Run estimates · Screens: Encounter victory, Boss victory, Defeat

8.2 The run

Encounters

- **Normal encounter:** 1 to 3 enemies; gives lots of Spirit Letters.
- **Shard encounter:** 2 or 3 enemies; gives a few Shards and a normal amount of Spirit Letters.
- **Potion Ingredient encounter:** 2 or 3 enemies; gives a few Potion Ingredients and a normal amount of Spirit Letters.

The more enemies in the fight, the higher the reward. The arena background changes as the player advances, to show the approach to the boss's lair.

Enemies and bosses

Enemy	Element (weak to)	Health	Attacks
Mushroom	Ember (Water)	Low	Flaming headbutt: high damage, slow
Slime	Water (Shock)	Medium	Weapon throw: medium damage, medium speed

Enemy	Element (weak to)	Health	Attacks
Golem	Shock (Ember)	High	Electric beam: low damage, fast
Fungus (boss)	Ember (Water)	Boss	Flaming headbutt; Fireball (medium damage, medium speed)
Sledge (boss)	Water (Shock)	Boss	Weapon throw; Slimy slap (low damage, fast)
Electro Golem (boss)	Shock (Ember)	Boss	Electric beam; Charged punch (high damage, slow)

- The boss is randomised at the start of each run. Defeating it ends the run.
- The first time each boss is defeated, it drops the missing half of its element's crystal, which unlocks new skills in the Hub.

Shops

- **Wandering Trader:** sells potions, health refills (30% or 100%) and Shard and Potion Ingredient pouches.
- **Altar:** shows 4 words (2 skills, 2 character upgrades) to buy for the run; each purchase raises the price of the others, and REROLL gives new words.
- Both use Spirit Letters. A run can include up to 3 of each; just before the boss the player chooses between a Trader and an Altar.

> In detail: D Enemies and bosses (attack list), E Map and shops · Numbers: H.3 Enemy and boss stats, H.4 Encounter rewards, H.5 Trader and Altar costs · Screens: Altar, Wandering Trader

8.3 Hub (meta-progression)

The Hub is the table where the wizard studies and upgrades his equipment. Every station opens by typing its name and pressing [Enter] (or with the arrow keys); typing START begins a run.

Station	What the player does there	Currency
Grimoire	Chooses the skills to bring: 1 per element (more with Slots)	–
Potion belt	Chooses the potions to bring; buys more sockets (up to 6)	Shards + Potion Ingredients (sockets)
Incantation Crystals' Stand	Unlocks and upgrades skills, character stats and skill slots	Shards
Alchemy Lab	Upgrades each potion's effect, duration and Trader stock	Potion Ingredients

> In detail: F Hub stations · Numbers: H.1 Character stats, H.2 Skill values, H.7 Potion upgrades · Screens: Hub, I.2 Hub wireframes

9 Level

- Early access has one stage, played on a fixed, hand-made map. Layouts are made by hand and only the encounter icons change between them: there is no runtime generation.
- The map is a branching path from Start to the boss: after each node, the player chooses which connected node to visit next.
- Every path has 10 nodes before the boss. The last node is always a shop: the player chooses between a Trader and an Altar.
- Each path passes through 1 to 3 shops and 7 to 9 fights (more shops mean fewer fights and fewer rewards), and includes at least one Shard encounter and one Potion Ingredient encounter.
- Any new layout must follow the same rules, so that the numbers in the balance data stay valid.

Map: E.1 Map layout · Numbers: H.6 Run estimates

10 Tutorial

When	What the tutorial page teaches
First fight	The game opens with a scripted fight against a single Mushroom. It pauses at each step to teach, in order: choosing an element, casting with 1 word, typing the target's name, dodging (1 word), parrying (2 words) and a full 3-word cast.
First Hub visit	A prompt asks the player to type the name of each station, to learn how typed menus work. The Alchemy Lab is introduced the first time the player owns Potion Ingredients.
First Trader or Altar	How to buy by typing an item's name, and how to reroll the Altar's words.
First boss victory	Shows the crystal half the boss dropped and sends the player to the Incantation Crystals' Stand to see the newly unlocked skills.

11 UI/UX, VFX and SFX

UI/UX

- **One input everywhere:** every menu (Hub, Trader, Altar, Hub stations) can be used by typing an option's name and pressing [Enter], or with the arrow keys and [Enter].
- **Main screens:** Hub, map, combat (spellbook raised while casting, lowered while targeting), Trader, Altar and the 4 Hub stations.
- **Combat HUD:** health bars with status icons under them, enemy and squad names, the turn order bar, the timer bar and the potion belt.

VFX

5–6 base effects, rescaled and recoloured, must cover every skill and enemy attack. Each element has its own colours: Ember red, Water blue, Shock yellow and purple.

SFX

Sounds are needed for typing, combat, status effects, enemies and bosses, shops and the Hub, plus music for the Hub, the map, fights and boss fights.

Full lists: G Audio-visual asset list · Screens: I UI wireframes · The feedback of each system is described in its appendix.

Appendix A – Combat in detail

Back to overview: 3 Combat

A.1 Attack

Back to overview: 3.2 Attack

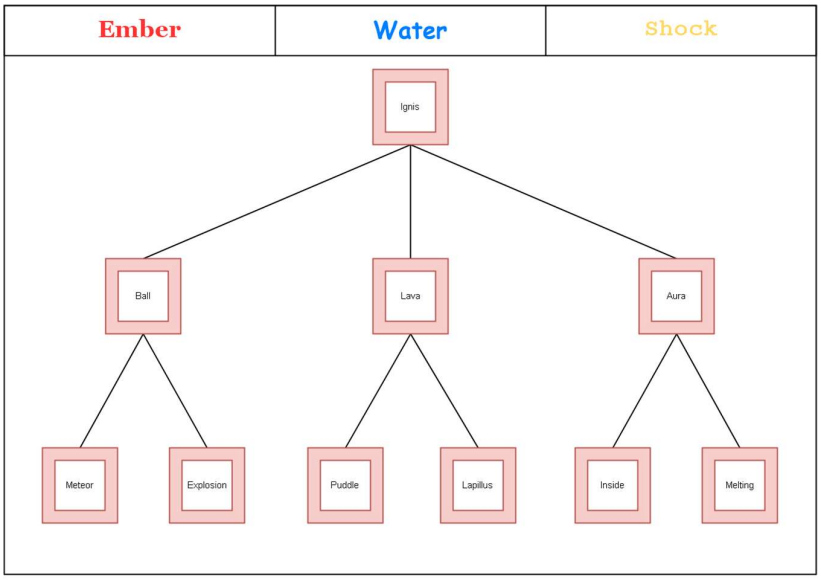

During the player's turn, they select the skill to cast, then type its words to cast it successfully. After casting, they type the enemy's name (or their own name) if the skill is single target, or the squad name if it is AOE. Skills are listed in B Skill list.

Basics

- Once the skill to cast has been selected the player can't change their mind and go back to the element choice.
- Each skill is cast with up to 3 words: the more words are typed correctly, the more powerful the skill.
- The words must be typed before the timer ends; the last completed word decides which skill is cast.
- The timer is the same for every skill (it can be extended with the Cast timing upgrade, see H.1).
- Each skill will have a specific UI, marking the first word and creating uniqueness for each one.
- A word counts only when it is typed completely and correctly. A word that is started but not finished when the timer ends (the "½ word" in the scenarios below) does not count.
- A wrong letter is shown in red and must be erased with [Backspace] before the word can continue.
- If all 3 words are completed before the timer ends, the casting phase ends immediately.
- The writing to be typed has a direction that will be indicated by the UI, and the words must be typed following a specific order.
- If no word is completed before the timer ends, the cast fails and the player's turn ends.
- After each cast, if one or more words are typed in, the player will always choose a target by typing an enemy's name, their own name or the squad name (see Select the target below).

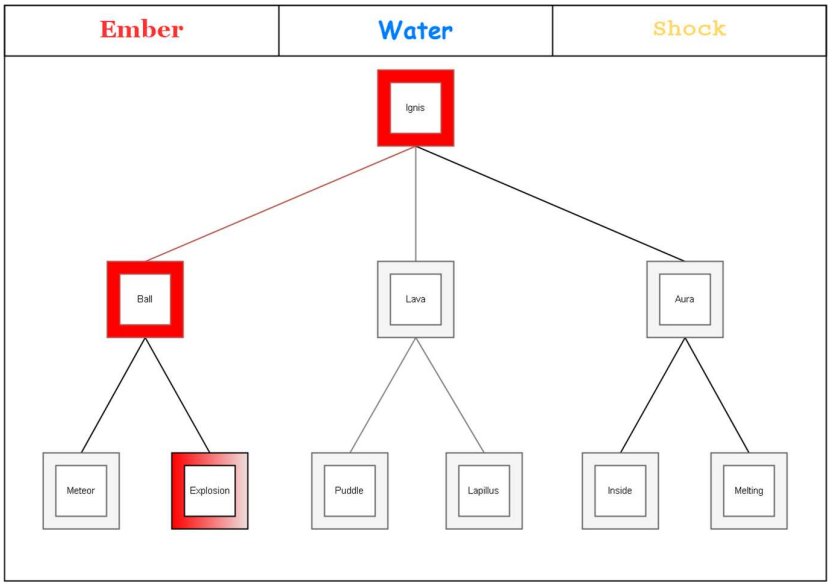

Choosing a skill to cast

- The player types the name of an element's page (Ember, Water or Shock) to open it in the grimoire.
- Pressing [Enter] confirms the element and starts the casting phase.
- There is no timer while choosing the element, and potions can be used at this point (see 7 Potions).
- Once the casting phase is started the player can not go back to this menu.
- Only the skills brought on the run (see F.2 Grimoire) or bought at an Altar can be cast.
- By pressing [Shift] the player can zoom in on the page (see Zoom in) to see more information about the current skill tree page.

Casting phase

- After the element is chosen, the timer starts.
- The player must quickly type as many words as they can.
- The first word is always the root skill of the element; the second word chooses the branch and the third word the final skill.
- While a word is typed, its cell fills with colour letter by letter.
- Once a word is completed, the player cannot go back and change branches, so pressing delete merely erases the letters of the current word.
- If fewer than three words are completed, the skill of the last completed word is cast, with less power.
- If no word is completed, the cast fails.
- When the timer ends, if at least one word is completed, the target selection phase starts with its own timer.

Scenarios when the casting timer ends

Words completed	What happens
0	The cast fails; the player loses the turn; no one is affected by the skill
1 (or 1 and ½)	The root skill is cast at minimum power (e.g. Ignis); the target selection phase begins
2 (or 2 and ½)	The branch skill is cast at medium power (e.g. Ball); the target selection phase begins
3	The chosen final skill is cast at maximum power (e.g. Meteor or Explosion); the target selection phase begins

Select the target

- After the cast, if one or more words have been typed correctly, the player must specify the target of the skill.
- If the skill is single target, the player types the name of an enemy, or their own name to target themselves.
- If the skill is AOE, the player types the squad name.
- The player must complete the name before the timer of this phase ends.
- Every enemy in a fight has a short, unique name shown above its health bar (two enemies of the same type never share a name). The squad name is shown above the whole group, and the player's name under the player's health bar.
- The target selection timer is the same for every skill (it can be extended with the Target selection timing upgrade, see H.1).
- If the player doesn't type a correct name, the attack is launched anyway but hits a random target (player's character included).

When the timer ends	What happens
No name written correctly	The skill hits a random target, the player included. For an AOE skill the random pick is between the squad and the player: if the player is picked, the enemies take no damage.
Name correct	The skill hits the chosen enemy, the player or the whole squad.

Feedback

After an element is chosen

- The book rises, showing the UI and covering almost all the screen.
- The timer bar starts to lower.

After the skill is typed in correctly

- The book lowers again, showing the enemies and the arena.
- If the skill is single target only the enemies' names are shown; if it is AOE only the squad name is shown.
- The timer bar resets and starts to lower again.

If the typing phase fails

- The VFX and sound for failing pop up.
- No one takes damage and the turn passes to the next character.

When the target is chosen or the timer ends

- The skill's VFX and sound start.
- When the VFX ends the damage animation starts, the damage sound plays and the damage number rises from the target's health bar.
- If the attack applies or charges a status effect, the status icon pops up under the health bar.
- If the skill is self-inflicted, the VFX, the sound and a screen filter of a specific colour (damage taken or buff) are displayed for a few seconds.

A.2 Defence

Back to overview: 3.3 Defence

During the enemy's turn, the player can defend against damage. Two words appear on the screen, which the player must type as fast as possible to evade or parry the incoming damage.

Basics

- Each attack has a set of words attached to it, specific in meaning and in length based on the power of the attack (for word lengths see H.3 Enemy and boss stats).
- Each attack will have a specific UI, marking the first word and creating uniqueness for each one.
- Each attack has its own timer and word length: slow attacks give more time but longer words, fast attacks give less time and shorter words.
- The Parry timing upgrade adds time to every attack timer, and the Dodge word length and Parry word length upgrades shorten word 1 and word 2 (see H.1 Character stats).
- Players must always start with the first word; they cannot start from the second word.
- Typing rules are the same as in the casting phase: a word counts only when it is complete, and a wrong letter must be erased with [Backspace].
- After the first word is spelled correctly, players decide whether to stop and evade (by pressing [Enter] or by not typing anything else until the timer ends), or take a chance and continue typing to attempt a parry.
- If the first word is spelled correctly, as soon as another letter is typed, players lose the chance to evade and must attempt the parry.
- The parry happens automatically as soon as the second word is typed in correctly.
- The parry deals a percentage of the enemy's attack damage (50% as a starting value, up to 100% with the Parry damage upgrade) directly to the attacking enemy.

Scenarios

Words completed	What happens
0	At the timer's end no word was typed correctly. The player cannot evade or parry and takes the attack's damage.
1	The player typed the first word correctly and didn't type any letter after it, either until the timer's end or until pressing [Enter]. The character dodges and takes no damage.
1 and ½	After the first word, the player tried to parry, but the second word was not complete or correct when the timer ended. The player cannot evade or parry and takes the attack's damage.
2	The player typed both words correctly (this resolves as soon as the second word is complete). The character parries, takes no damage and deals a percentage of the attack's damage back to the attacker.

Feedback

Start of the enemy turn

- The enemy starts its attack: the attack animation and VFX start to play.
- The camera turns towards the enemy and focuses on it.

Words appear

- The words appear on screen.
- The VFX and the animation go into slow motion.
- The timer starts.

Timer end, no word written correctly

- The action returns to normal speed and the attack VFX and animations play until they end.
- The VFX hits the player (camera) and the screen turns red for a brief moment.

- The damage sound plays.
- The player's health bar decreases and the damage number appears briefly to the right of the bar.

Timer end, one word written correctly

- The action returns to normal speed and the attack VFX and animations play until they end.
- The camera shakes and moves right or left (to mimic a dodge) and the attack VFX passes close to the player.
- The dodge sound plays. No damage is taken.
- The player returns to the original position.

Two words written correctly

- The action returns to normal speed and the attack VFX and animations play until they end.
- The camera moves and moves back; the VFX heads toward the player, but before it touches the player another VFX plays at the spot where the player was standing (to mimic a barrier).
- The counterattack VFX and sound play.
- The counterattack VFX hits the enemy, with the same feedback as damage dealt (see A.1 Attack).
- The player returns to the original position.

Appendix B – Skill list

Back to overview: 4 Skills

Each element has a skill tree with 3 branches and 10 skills, divided into 3 groups: single target damage (4 skills, root skill included), AOE damage (3 skills) and buff/debuff single target (3 skills). Skills can be levelled up in damage and/or effectiveness in the Hub (see F.4 Incantation Crystals' Stand). Some skills apply effects that change the target's damage, ability to attack or health (see C Status effects). Values below are at level 1; all levels are in H.2 Skill values and costs.

B.1 Ember

No.	Skill	Effect
1	**Ignis**	Shoots a fireball at a single target that deals 15 damage.
1.1	**Ball**	Shoots a fireball at a single target that deals 30 damage.
1.1.1	**Meteor**	A fireball from the sky strikes the target and deals 50 damage.
1.1.2	**Explosion**	A fireball that explodes on contact with the target, deals 30 damage and a percentage of Burn based on the element resistance.
1.2	**Lava**	Creates a puddle of fiery sparks under the target team that deals 15 damage (AOE).
1.2.1	**Lapillus**	A rain of lapilli from the sky hits the target team and deals 30 damage (AOE).
1.2.2	**Puddle**	Creates a lava jet under the target team, deals 15 damage and a percentage of Burn based on the element resistance (AOE).
1.3	**Aura**	Applies Powerful to the target for 1 turn.
1.3.1	**Inside**	Applies Powerful to the target for 2 turns.
1.3.2	**Melting**	Applies Defenceless to the target for 2 turns.

B.2 Water

No.	Skill	Effect
2	**Hydro**	Shoots a ball of water at a single target that deals 15 damage.
2.1	**Jet**	Shoots a ball of water at a single target that deals 30 damage.
2.1.1	**Boiling**	Shoots a ball of boiling water at a single target that deals 50 damage.
2.1.2	**Freezing**	Shoots an ice ball at a single target that explodes on impact, deals 30 damage and a percentage of Freeze based on the element resistance.
2.2	**Wave**	A wave hits the target team and deals 15 damage (AOE).
2.2.1	**Tsunami**	A giant wave hits the target team and deals 30 damage (AOE).
2.2.2	**Iceberg**	A giant wave mixed with pieces of ice hits the target team, deals 15 damage and a percentage of Freeze based on the element resistance (AOE).
2.3	**Well**	A squirt of water pops from the ground below the target and heals it by 30 health.
2.3.1	**Remedial**	A squirt of water pops from the ground below the target, heals it by 30 and applies Regen for 3 turns.
2.3.2	**Infected**	A squirt of water pops from the ground below the target, giving it Weakness for 4 turns.

B.3 Shock

No.	Skill	Effect
3	**Fulgur**	A lightning bolt hits a single target and deals 15 damage.
3.1	**Bolt**	A lightning bolt hits a single target and deals 30 damage.
3.1.1	**Impact**	A lightning bolt hits a single target and deals 50 damage.
3.1.2	**Discharge**	A yellow lightning bolt hits a single target, deals 30 damage and a percentage of Overcharge based on the element resistance.
3.2	**Wire**	A purple thunderstrike that deals 15 damage (AOE).
3.2.1	**Overflow**	A purple thunderstrike that deals 30 damage (AOE).
3.2.2	**Conduit**	A yellow thunderstrike that deals 15 damage and a percentage of Overcharge based on the element resistance (AOE).
3.3	**Load**	Applies Speed up to the target for 2 turns.
3.3.1	**Energy**	Applies Speed up to the target for 4 turns.
3.3.2	**Negative**	Applies Vulnerable to the target for 3 turns.

Appendix C – Status effects in detail

Back to overview: 5 Status effects

Status effects can be applied to targets in 2 ways.

With skills that deal damage

- These effects directly affect the target's health or ability to act.
- These skills deal the same damage as the branch skill above them, and also add a percentage of charge to the effect (see 6 Element resistance).
- When 100% charge is reached, the effect activates and begins to affect the target.
- While the effect is active, it is not possible to recharge the same effect. However, multiple effects can be applied at the same time to the same target.

Effect	Description
Burn	Deals 10 damage to the target at the beginning of each of its turns; once activated, it lasts 3 turns.
Freeze	Freezes the target in place, not permitting it to move or attack, for 2 turns.
Overcharge	Spreads 25% of the damage taken by the target (any type) among its squad; it lasts 2 turns.

With buff/debuff skills

- These effects are more passive and directly affect the target's statistics.
- They are activated automatically when the skill is cast, without any cost.
- While the effect is active, it is not possible to stack the same effect. However, multiple effects can be applied at the same time to the same target.

Effect	Description
Powerful	Increases the target's attack power by 50%.
Defenceless	The target takes 50% more damage; its element resistances still apply.
Regen	Gives 30 health to the target at the beginning of every turn.
Weakness	The target deals 30% less damage.
Speed up	Increases the target's Speed by a percentage (25% with Load, 75% with Energy at level 1), so it takes turns more often (see 3.1 Turn order).
Vulnerable	Reduces the target's element resistances by a percentage (50% at level 1); at 100% it removes them all.

Potion versions

Upgraded potions can apply weaker versions of some of these effects (see F.5 Alchemy Lab):

Effect	Description
Potion Regen	Gives 15 health to the target at the beginning of every turn.
Potion Powerful	Increases the target's attack power by 30%.
Potion Speed Up	Slightly increases the character's Speed.

Feedback

Status charging

- Normal attack feedback (see A.1 Attack).
- Under the target's health bar the status icon is shown in full colour only for the percentage of charge (like a pie chart); the rest is in shades of grey.

Status applied

- The specific icon is shown under the target's health bar.

- The status VFX plays and stays around the target until the status ends.
- The status sound plays, then the turn goes on.

Status during turns

- Statuses take effect at the beginning of the affected character's turn, so their sounds, animations and VFX play at that moment.

Status end

- The countdown to the end of a status proceeds at the end of the target's turn, so sounds, animations, VFX and icon fading occur at the end of the character's turn.

Appendix D – Enemies and bosses

Back to overview: 8.2 The run

Exact numbers (health, Speed, damage, timers, word lengths) are in H.3 Enemy and boss stats; how many enemies spawn in each encounter is in H.4 Encounter rewards.

D.1 Enemies

Three types of basic enemies can be found in encounters:

Enemy	Element	Vulnerable to	Health	Attack
Mushrooms	Ember	Water	Low	Flaming headbutt
Slimes	Water	Shock	Medium	Weapon throw
Golems	Shock	Ember	High	Electric beam

D.2 Bosses

- The bosses are tougher enemies, found in the final encounter of the stage. In early access there are 3, more powerful versions of the basic enemies.
- The bosses rotate: each time a player starts a run, the final boss is randomised.
- When a boss is defeated, the run ends and the player returns to the Hub.
- The first time a boss is defeated, it drops the missing half of its element's crystal, which unlocks new skills and upgrades in the Incantation Crystals' Stand (see F.4).

Boss	Element	First defeat drops	Rewards	Attacks
Fungus	Ember	Missing half of the Ember Crystal	A lot of Shards and Potion Ingredients	Flaming headbutt, Fireball
Sledge	Water	Missing half of the Water Crystal	A lot of Shards and Potion Ingredients	Weapon throw, Slimy slap
Electro Golem	Shock	Missing half of the Shock Crystal	A lot of Shards and Potion Ingredients	Electric beam, Charged punch

D.3 Attack list

The attack's speed sets the defence phase: slow attacks have a longer timer and longer words, fast attacks a short timer and short words (see A.2 Defence).

Attack	Used by	Description	Damage	Speed
Flaming headbutt	Mushroom, Fungus	Its head catches fire and it headbutts the player	High	Slow: longer timer, longer words
Weapon throw	Slime, Sledge	It throws the weapon stuck inside its body with great force	Medium	Medium: normal timer, normal length words
Electric beam	Golem, Electro Golem	It charges a beam in its chest that hits the player very quickly	Low	Fast: short timer, short words
Fireball	Fungus	It creates a fireball and throws it at the player	Medium	Medium: normal timer, normal length words
Slimy slap	Sledge	It slaps the player with its slimy "arm"	Low	Fast: short timer, short words
Charged punch	Electro Golem	It charges a punch and hits the player with incredible strength	High	Slow: longer timer, longer words

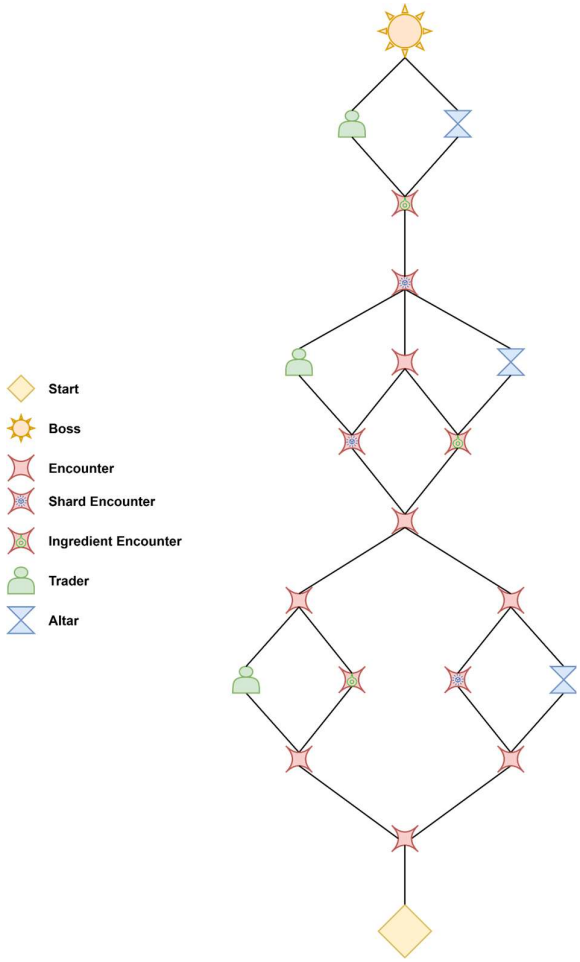

Appendix E – Map and shops

Back to overview: 8.2 The run

E.1 Map layout

Back to overview: 9 Level

Map structure 1 (rules in 9 Level):

E.2 Encounters

- Encounters are the fights against basic enemies.
- As the player advances through the map, the arena background changes to simulate movement toward the boss's lair.
- Each encounter gives Spirit Letters, the amount of which depends on the type of encounter and the number of enemies: the more enemies, the higher the reward (see H.4 Encounter rewards).

Type	Enemies	Rewards
Normal encounter	1 to 3	Lots of Spirit Letters
Shard encounter	2 or 3	A few Shards and a normal amount of Spirit Letters
Potion Ingredient encounter	2 or 3	A few Potion Ingredients and a normal amount of Spirit Letters

E.3 Wandering Trader

- To choose what to buy, the player types the item's name and presses [Enter], or moves with the arrow keys and presses [Enter] on the selected item.
- A run can include up to 3 Traders, depending on the path chosen on the map (see 9 Level).
- A Trader and an Altar always wait just before the boss: the player chooses one of the two.
- The number of potions the Trader stocks can be increased in the Hub, in the Alchemy Lab (see F.5).

Item	Stock	Notes
Health potion	2 at the start	Stock upgradable
Speed potion	2	Stock upgradable
Power potion	2	Stock upgradable
Small health refill	1	Restores 30% of health
Full health refill	1	Restores 100% of health
Shards pouch	No limit	Each pouch contains a random amount from 100 to 200; the cost increases each time it is bought
Potion Ingredient pouch	No limit	Each pouch contains a random amount from 5 to 15; the cost increases each time it is bought

Costs: H.5 Trader and Altar costs · Screens: Wandering Trader, Buy pop-up

Feedback

- All limited items, when bought, move towards the player and disappear (as if he were grabbing them).
- Pouches, when bought, move towards the player and disappear; a few moments later a new one falls from above (from out of camera) into its place.

E.4 Altar

- To choose what to buy, the player types the word and presses [Enter], or moves with the arrow keys and presses [Enter] on the selected word.
- A run can include up to 3 Altars, depending on the path chosen on the map (see 9 Level).
- A Trader and an Altar always wait just before the boss: the player chooses one of the two.
- Here the player can acquire new skills for the grimoire (only from the ones unlocked in the Hub) and upgrade character stats.
- 4 words appear on the altar: 2 related to skills and 2 to character enhancements.
- Each time a word is bought, it leaves an empty space and the remaining words increase in cost.
- The player can reroll the words by typing REROLL and pressing [Enter]: the first reroll is free, then each one costs more.
- If all 4 words are bought, a free automatic reroll happens.

Costs: H.5 Trader and Altar costs · Screen: Altar

Feedback

- When a word is bought it dissolves and leaves a blank space, and the remaining words increase in cost.
- If it is a skill, it appears on the book in a choreographed way to show it to the player.
- If it is a statistic, the character's page is shown and the stat changes.
- When a reroll occurs, every word still on the screen disappears and four new ones appear with the new prices.

Appendix F – Hub stations

Back to overview: 8.3 Hub

F.1 Hub

- This is the main Hub: the table where the wizard studies and upgrades his equipment.
- The 3D objects are interactive and open a menu where the player can upgrade and choose what to bring on the next run.
- There are 4 stations: the Grimoire, the Potion belt, the Incantation Crystals' Stand and the Alchemy Lab.
- To open a menu, the player types its name and presses [Enter], or moves with the arrow keys and presses [Enter].
- From here the player starts the run by typing START and pressing [Enter].

Screen: Hub

F.2 Grimoire

- Here the player chooses which skills to bring.
- The player can bring one skill per element (more with the Slots upgrade in the Incantation Crystals' Stand), selecting them from the element's page.
- To choose a skill, the player types the final word of the skill and presses [Enter], or moves with the arrow keys and presses [Enter].
- Choosing a final skill brings its whole path: during the run the player can cast its root skill (1 word), its branch skill (2 words) or the final skill itself (3 words).
- If no skill is selected, the skill selected for the previous run stays selected.

Screen: Grimoire

Feedback in the Hub

- When a skill is chosen, its path and words are in the element's colour.
- When a skill is selectable (unlocked) but not chosen for the run, its path and word are black.
- When a skill is locked, its path and word are grey.
- If the boss crystal has not been found yet, the branches it unlocks are not shown in the book.

Feedback during a run

- When a skill can be cast, its path and word are black.
- As the player types, the path and words are highlighted in the element's colour.
- When a skill is unlocked (so it can be bought at the Altar) it is shown in grey until it is purchased; then it becomes black.
- A locked skill is not shown in the book.

F.3 Potion belt

- Here the player chooses which potions to bring: 3 at the start, more with extra sockets.
- To choose, the player first selects a socket (by pressing its number), then types the name of the potion and presses [Enter], or moves with the arrow keys and presses [Enter].
- The potion belt fills up automatically: if nothing is changed, the player starts with the potions selected for the previous run.
- The player can buy more potion sockets with Shards and Potion Ingredients by selecting the enhancement option (up to 6 sockets).

Costs: H.7 Potion upgrades and costs · Screen: Potion belt

Feedback: choosing potions

- When a socket is selected, the number on its label is highlighted.
- When a potion is selected, it slips into one of the unlocked sockets (as if inserted from above).

Feedback: buying a socket

- Locked sockets have a label: Buy “socket number”.
- When selected, the socket is highlighted and its price is shown; the player must then confirm the purchase.
- When a socket is bought, a new socket appears next to the previous one (until the sixth is bought).

F.4 Incantation Crystals’ Stand

- Here the player spends Shards to unlock and upgrade skills, upgrade character stats and increase the number of skill slots per element.
- There are 4 crystals, each with its own page: one for the character and one for each element. The player types the page name (Character, Ember, Water or Shock) and presses [Enter] to change crystal.
- On a page, the player types the word linked to an upgrade to select it and presses [Enter] to buy it.
- After a boss is defeated for the first time, the missing piece of its crystal is reattached, unlocking new skills and power-ups.

Character crystal (all available from the start)

Upgrade	Levels
Health	5
Speed	5
Starting Spirit Letters	5
Cast timing	3
Target selection timing	3
Parry timing	3
Dodge word length	3
Parry word length	3
Parry damage	3

Element crystals (every skill has 3 levels)

Availability	Ember	Water	Shock
Unlocked by default	Ignis, Ball, Meteor	Hydro, Well, Remedial	Fulgur, Wire, Conduit
Locked, can be bought from the start	Lava, Lapillus, Aura, Melting	Jet, Boiling, Freezing, Infected	Overflow, Load, Energy, Negative
Locked, can be bought after the first boss defeat	Explosion, Puddle, Inside (Fungus)	Wave, Tsunami, Iceberg (Sledge)	Bolt, Impact, Discharge (Electro Golem)
Status and Slots (level 1 owned; levels 2–3 after the boss)	Burn, Slots	Freeze, Slots	Overcharge, Slots

Costs: H.1 Character stats and costs (Character crystal), H.2 Skill values and costs (element crystals) · Screen: Incantation Crystals’ Stand

Feedback: buying a new skill

- When a skill is unlocked, its path and words are in the element’s colour and a crystal is placed on each word node.
- When a skill is locked, its path is black, no crystals are placed on its word nodes and only the last word is shown.
- When the skill is bought it becomes unlocked: all the crystals and the intermediate words appear, so they can be upgraded.

- If the boss crystal has not been found yet, the branches it unlocks are not shown at all.

Feedback: upgrading an unlocked skill

- Each word node has a crystal; when the node is upgraded, the crystal grows.
- Status and slots start at level 1 and are not connected by a path; like the other nodes, they have a crystal that grows when upgraded. Their upgrades appear only after the boss crystal is found.

F.5 Alchemy Lab

- Here the player spends Potion Ingredients to upgrade each potion's effectiveness and duration, and the number of potions the Wandering Trader stocks.
- The player types the potion name and presses [Enter] to choose a potion, then types the word linked to an upgrade and presses [Enter] to buy it.

Potion	Effectiveness (3 levels)	Duration (3 levels, +1 turn per level)	Reserve (3 levels)
Health potion	More healing	Also gives Potion Regen	Trader stock up to 4
Power potion	Bigger damage boost	Also gives Potion Powerful	Trader stock up to 4
Speed potion	Bigger Speed boost	Also gives Potion Speed Up	Trader stock up to 4

Costs: H.7 Potion upgrades and costs · Screens: Alchemy Lab, Potion selected for upgrade, Upgrade pop-up

Feedback

- The cauldron next to the potions emits steam each time an upgrade is made.
- The potion's model changes when it is upgraded: effectiveness makes its colour more intense, duration makes the potion in the vial larger, and reserve increases the number of potions on the potion stand.

Appendix G – Audio-visual asset list

Back to overview: 11 UI/UX, VFX and SFX

G.1 VFX

Rule: 5–6 base effects, rescaled and recoloured, must cover every skill and enemy attack. Each element has its own colours (Ember red, Water blue, Shock yellow and purple).

Group	Required effects
Projectiles	Fireball, water ball, ice ball, lightning bolt (single target skills and the boss fireball)
Area effects	Lava puddle, rain of lapilli, wave, thunderstrike (AOE skills)
Buffs, debuffs and heals	Aura around the target, water squirt from the ground
Status effects	Burn, freeze, overcharge and the buff/debuff auras that stay on the target while active
Defence	Slow motion, dodge, parry barrier and counterattack
Feedback	Cast fail, hit flash, red screen when the player is hit, coloured screen filter for self-cast skills
Hub	Cauldron steam, crystal growth, potion colour change

G.2 SFX

Group	Required sounds
Typing	Correct letter, wrong letter, completed word, full 3-word cast, timer about to run out
Combat	Cast fail, one sound per skill (shared within an element where possible), hit, dodge, parry, counterattack
Status effects	Applied, active (each turn) and ended
Enemies and bosses	One sound per attack, hit and death
Shops and Hub	Potion use, buy, reroll, crystal upgrade, cauldron steam, menu selection
Music	Hub, map, fight and boss fight

Appendix H – Balance data

This appendix collects every balance and economy number in the game and is the reference for them: when a value changes, it is changed here first. All values are starting values, to be tuned in playtests.

H.1 Character stats and costs

Back to overview: 3 Combat

Each cell shows the value and, below it in grey, the cost in Shards to buy that level in the Incantation Crystals' Stand. "owned" means the level is available from the start.

Stat	LV 1	LV 2	LV 3	LV 4	LV 5
Health	100 owned	125 250	150 500	175 750	200 1000
Speed	10 owned	12 250	14 500	16 750	18 1000
Starting Spirit Letters	200 owned	400 250	600 500	800 750	1000 1000
Cast timing	6 sec owned	7 sec 500	8 sec 1000		
Target selection timing	3 sec owned	4 sec 400	5 sec 800		
Parry timing	+0 sec owned	+1 sec 750	+2 sec 1500		
Dodge word length	0 letters owned	−1 letter 1000	−2 letters 2000		
Parry word length	0 letters owned	−1 letter 1000	−2 letters 2000		
Parry damage	50% owned	75% 2000	100% 4000		

H.2 Skill values and costs

Back to overview: 4 Skills

Same layout as above: value, and below it the cost in Shards. A cost at LV 1 is the price to unlock the skill; "owned" means it is unlocked by default. Status and slot rows apply to the whole element.

Ember

Upgrade	LV 1	LV 2	LV 3
Ignis – damage	15 owned	17 300	20 600
Ball – damage	30 owned	35 300	40 600
Meteor – damage	50 owned	55 300	60 600
Explosion – damage	30 150	35 300	40 600
Lava – damage	15 150	17 300	20 600
Lapillus – damage	30 150	33 300	35 600
Puddle – damage	15 150	17 300	20 600
Aura – bonus	50% 150	50% 300	75% 600
Aura – turns	1 150	2 300	2 600
Inside – bonus	50% 150	50% 300	75% 600
Inside – turns	2 150	3 300	3 600
Melting – malus	50% 150	50% 300	100% 600
Melting – turns	2 150	3 300	3 600
Burn – damage	10 owned	13 400	15 800
Skill slots	1 owned	2 500	3 1000

Water

Upgrade	LV 1	LV 2	LV 3
Hydro – damage	15 owned	17 300	20 600
Jet – damage	30 150	35 300	40 600
Boiling – damage	50 150	55 300	60 600
Freezing – damage	30 150	35 300	40 600
Wave – damage	15 150	17 300	20 600
Tsunami – damage	30 150	33 300	35 600
Iceberg – damage	15 150	17 300	20 600
Well – bonus	30 owned	40 300	55 600
Remedial – bonus	30 owned	30 300	55 600
Remedial – turns	3 owned	4 300	4 600
Infected – malus	30% 150	30% 300	80% 600
Infected – turns	4 150	5 300	5 600
Freeze – turns	2 owned	3 400	4 800
Skill slots	1 owned	2 500	3 1000

Shock

Upgrade	LV 1	LV 2	LV 3
Fulgur – damage	15 owned	17 300	20 600
Bolt – damage	30 150	35 300	40 600
Impact – damage	50 150	55 300	60 600
Discharge – damage	30 150	35 300	40 600
Wire – damage	15 owned	17 300	20 600
Overflow – damage	30 150	33 300	35 600
Conduit – damage	15 owned	17 300	20 600
Load – bonus	25% 150	25% 300	50% 600
Load – turns	2 150	3 300	3 600
Energy – bonus	75% 150	75% 300	100% 600
Energy – turns	4 150	5 300	5 600
Negative – malus	50% 150	50% 300	100% 600
Negative – turns	3 150	4 300	4 600
Overcharge – turns	2 owned	3 400	4 800
Skill slots	1 owned	2 500	3 1000

H.3 Enemy and boss stats

Back to overview: 8.2 The run

Attack timer is the time the player has to type the defence words; word lengths are in letters (word 1 dodges, word 2 parries).

Enemies

Stat	Mushroom	Slime	Golem
Element	Ember	Water	Shock
Health	50	60	70
Speed	9	13	16
Attack	Flaming headbutt	Weapon throw	Electric beam
Attack damage	20	15	10
Attack timer	7 sec	6 sec	4 sec
Word 1 length	5	4	3
Word 2 length	7	5	4

Bosses

Stat	Fungus	Sledge	Electro Golem
Element	Ember	Water	Shock
Health	200	200	200
Speed	11	14	17
Attack 1	Flaming headbutt	Weapon throw	Electric beam
Attack 1 – damage	20	15	10
Attack 1 – timer	7 sec	6 sec	4 sec
Attack 1 – word 1 length	5	4	3
Attack 1 – word 2 length	7	5	4
Attack 2	Fireball	Slimy slap	Charged punch
Attack 2 – damage	15	10	20
Attack 2 – timer	6 sec	4 sec	7 sec
Attack 2 – word 1 length	4	3	5
Attack 2 – word 2 length	5	4	7

H.4 Encounter rewards

Back to overview: 8.1 Currencies

Currencies earned by winning each type of fight, by number of enemies.

Encounter	Enemies	Spirit Letters	Shards	Potion Ingredients
Normal encounter	1 enemy	100	0	0
	2 enemies	300	0	0
	3 enemies	500	0	0
Shard encounter	2 enemies	200	150	0
	3 enemies	400	250	0
Potion Ingredient encounter	2 enemies	200	0	10
	3 enemies	400	0	20
Boss	1 boss	0	450	30

H.5 Trader and Altar costs

Back to overview: 8.2 The run

All costs are in Spirit Letters.

Wandering Trader

Item	Cost	Increase per purchase
Potion (any)	100	–
Small health refill	50	–
Full health refill	150	–
Shards pouch	400	+400
Potion Ingredient pouch	400	+400

Altar

Item	Cost	Increase per purchase
Reroll	0 (first reroll)	+100
Word (skill or stat)	400	+200

H.6 Run estimates

Back to overview: 9 Level

Expected totals for one run on the early access map, used to check the costs above. Spirit Letters are counted without power-ups.

Item	Min	Max
Spirit Letters at the 1st shop	200	400
Spirit Letters at the 2nd shop	1200	1800
Spirit Letters at the 3rd shop	1700	2800
Shards from encounters	800	1200
Potion Ingredients from encounters	50	90

H.7 Potion upgrades and costs

Back to overview: 7 Potions

Each cell shows the value and, below it in grey, the cost in Potion Ingredients (Alchemy Lab). Potion belt sockets cost Potion Ingredients + Shards. “owned” means the level is available from the start.

Upgrade	LV 1	LV 2	LV 3	LV 4
Health potion – healing	30 owned	35 50	40 100	
Health potion – Potion Regen turns	0 owned	1 60	2 120	
Health potion – Trader stock	2 owned	3 50	4 100	
Power potion – damage boost	30% owned	35% 50	40% 100	
Power potion – Potion Powerful turns	0 owned	1 60	2 120	
Power potion – Trader stock	2 owned	3 50	4 100	
Speed potion – Speed boost	+20 Speed owned	+40 Speed 50	+60 Speed 100	
Speed potion – Potion Speed Up turns	0 owned	1 60	2 120	
Speed potion – Trader stock	2 owned	3 50	4 100	
Potion belt – sockets	3 owned	4 100 + 250	5 200 + 500	6 300 + 750

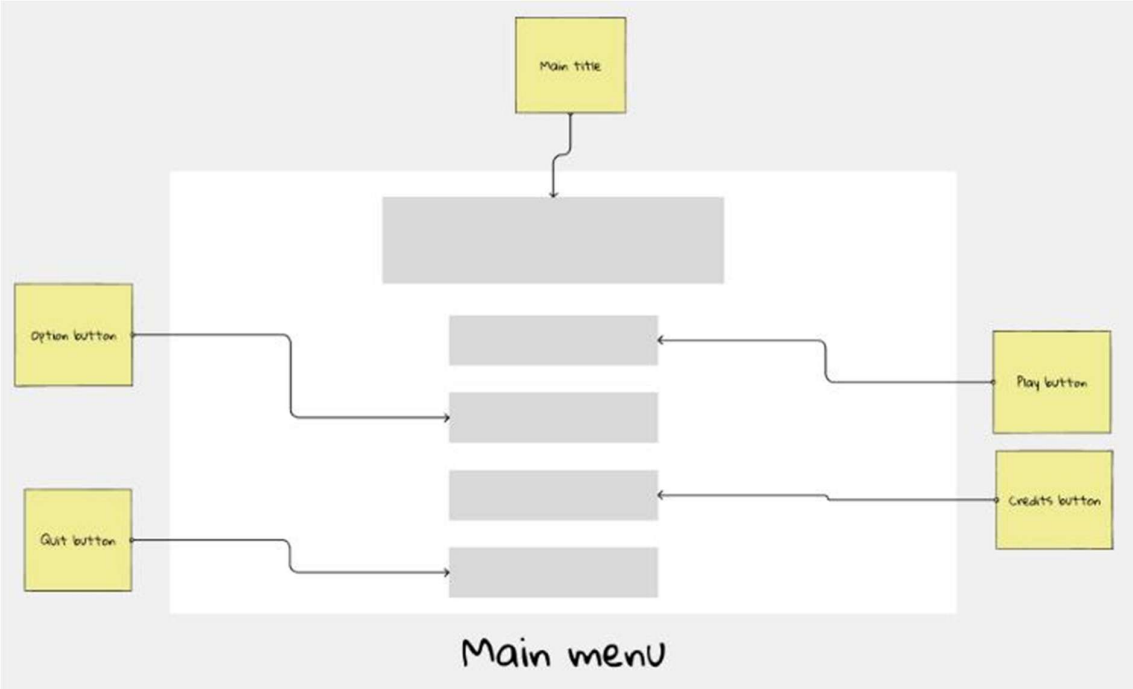

Appendix I – UI wireframes

Back to overview: 11 UI/UX, VFX and SFX

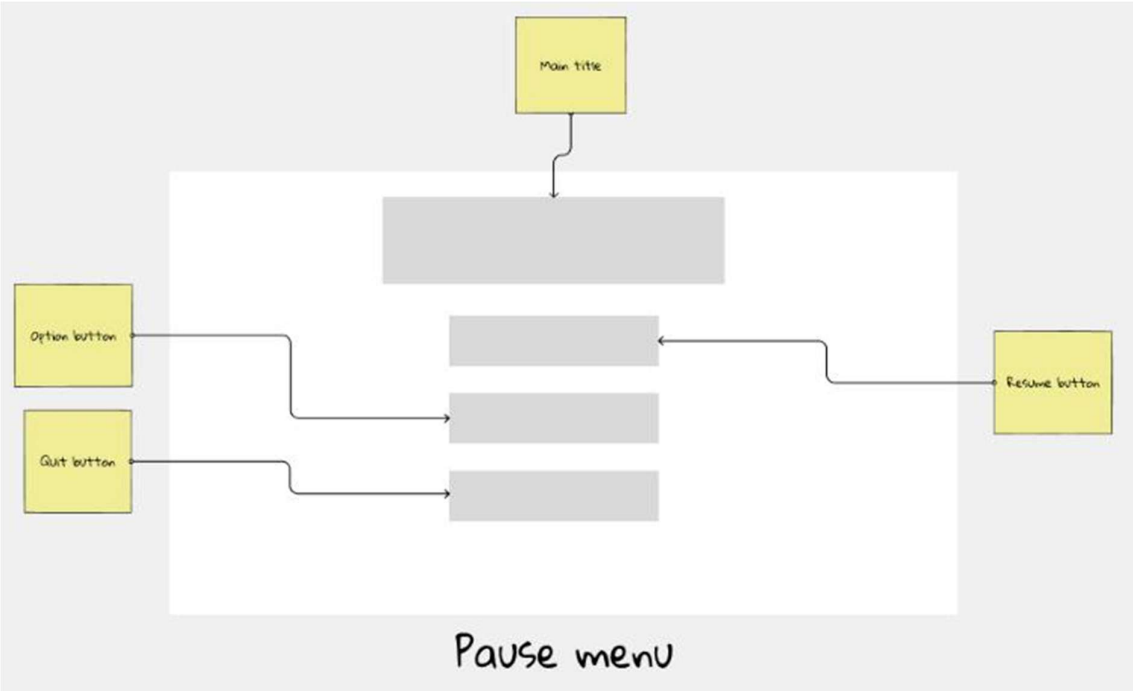

Wireframes of every screen, exported from the Figma file. They show layout and content, not final art: the yellow notes explain what each element does.
