
TYPE WIZARD
Type your spells. Parry with your fingers.

Overview

A turn-based **rogue-lite** where you play a wizard and **your keyboard is your spellbook**: every attack and every defence is typed.

A

Type to attack

Choose an element from your grimoire, then type up to **3 spell words** before time runs out. More words, stronger spell. Then type the target's name to unleash it.

D

Type to defend

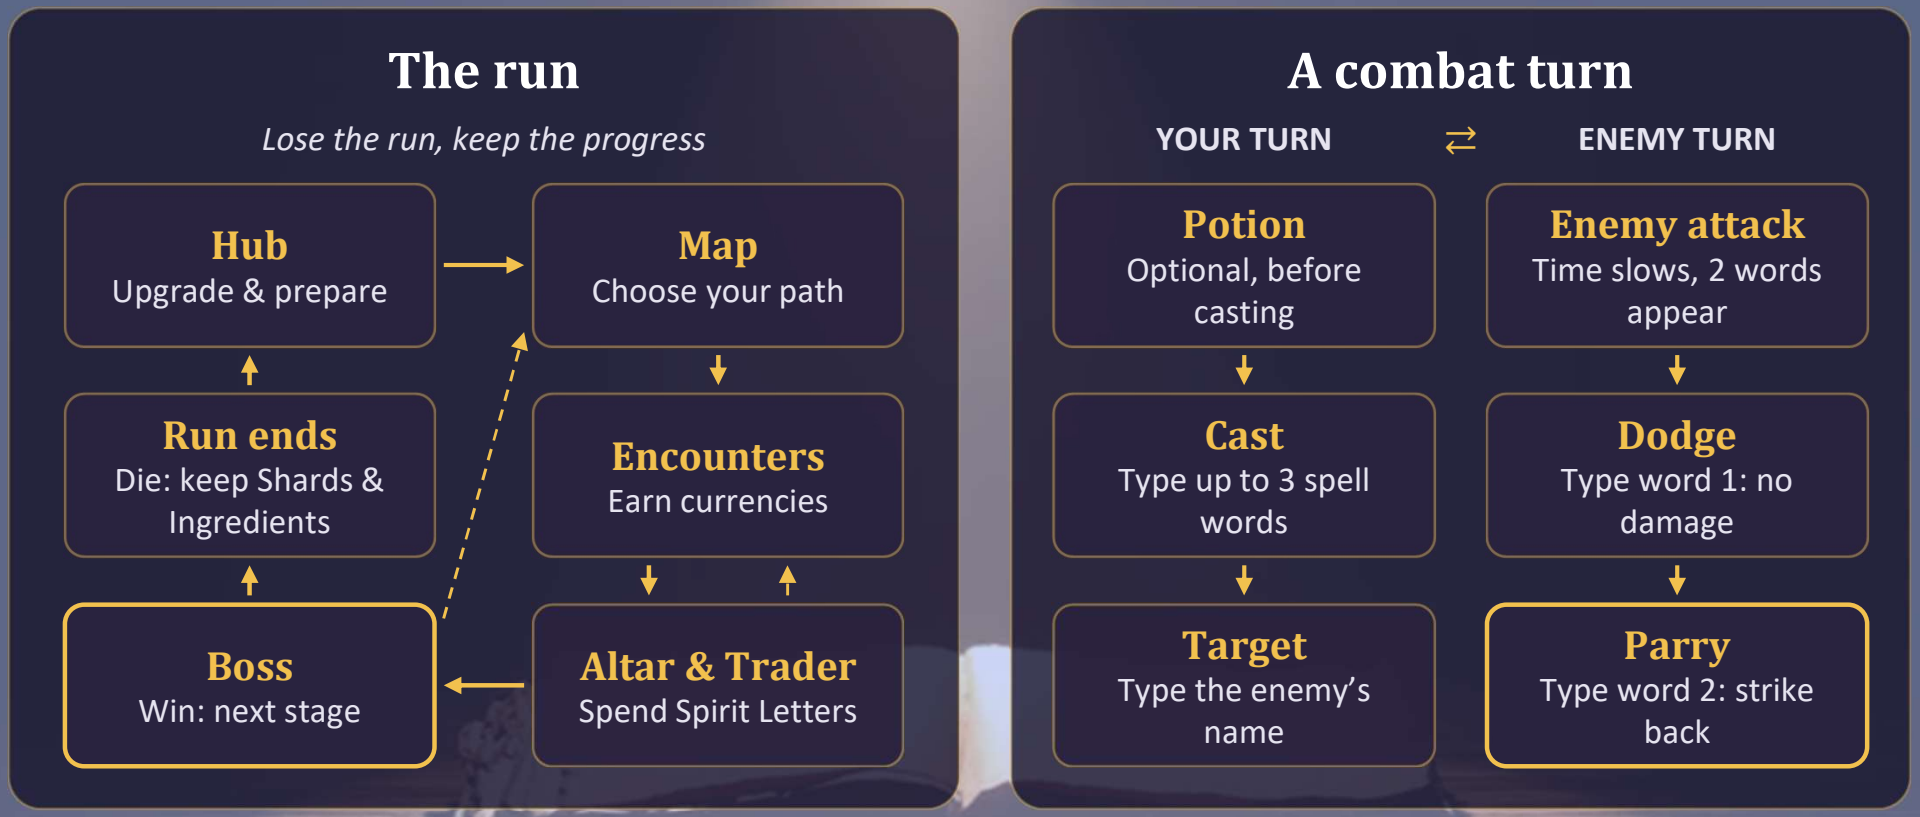

When an enemy attacks, time slows down. Type **1 word to dodge**, or risk a second word to **parry** and strike back.

U

Grow every run

Choose your path on a branching map, buy spells and potions along the way. **Permanent upgrades** in the Hub carry over to the next run.

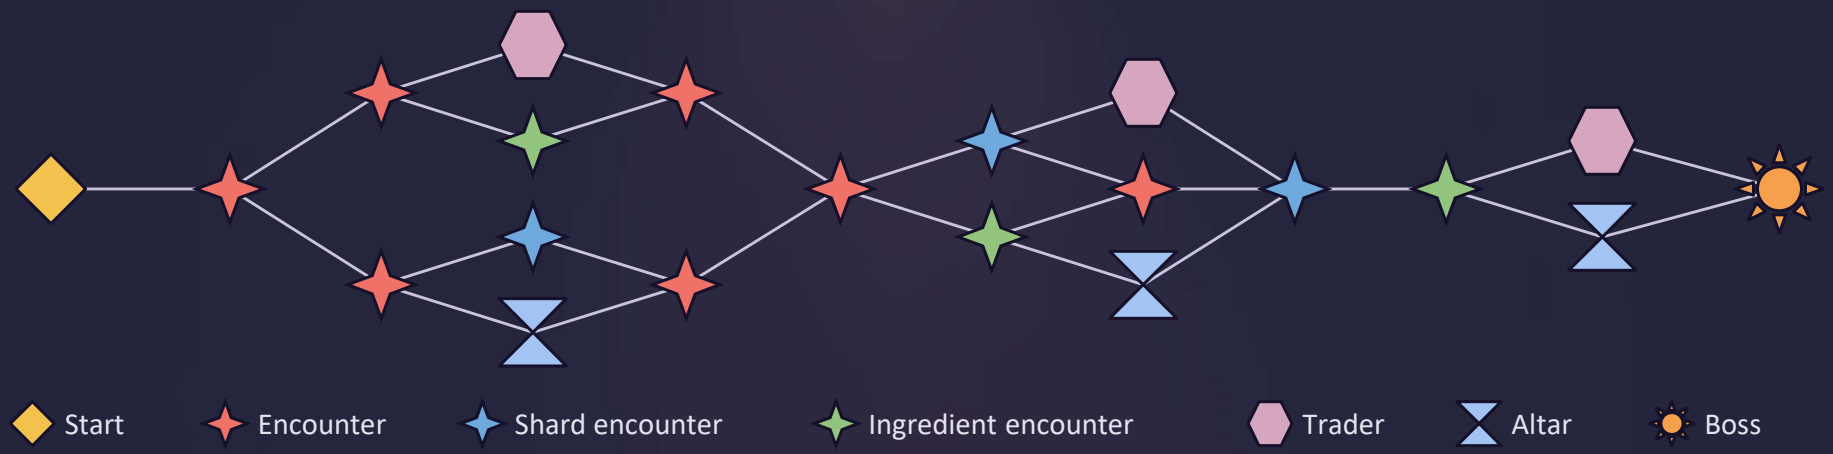

Game loop

Turn order is set by each character's Speed

Rogue-lite structure

Example: map layout of a single stage

Permanent progress

Beat the boss to reach the **next stage**. Die and the run ends: Spirit Letters are lost, **Shards and Ingredients** are kept for the Hub.

Choose your path

Fixed hand-made layouts with fights, **Altars** (spells, stats) and **Traders** (potions). Both always wait before the boss.

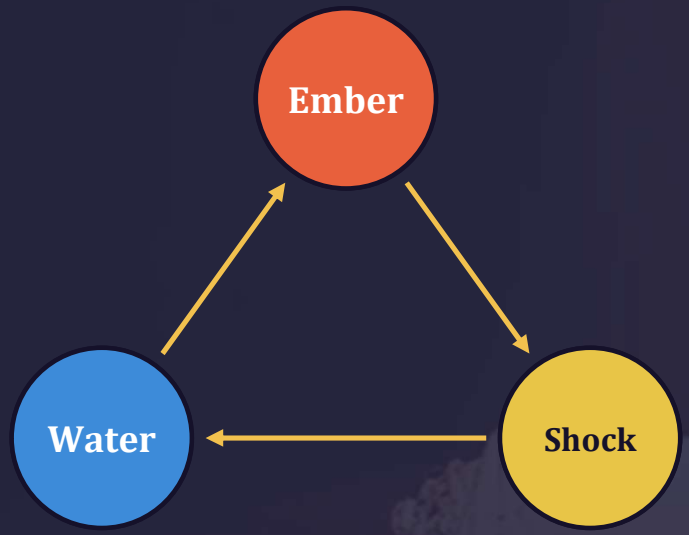

Rotating bosses

Each stage ends with a boss drawn from a **rotating pool**. Defeating each boss for the first time **unlocks new spells** of its element.

Combat

Turn order set by **Speed** · Up to **3 enemies** per fight · Bigger fights, **bigger rewards**

Elements

Effective hit: 130% damage
Resisted hit: 70% damage

M — Mushroom *Ember, weak to Water*

Slow, heavy headbutt: long words, more time.

HP 50 · DMG 20 · SPD 9

S — Slime *Water, weak to Shock*

Balanced weapon throw: medium words and time.

HP 60 · DMG 15 · SPD 13

G — Golem *Shock, weak to Ember*

Fast electric beam: short words, little time.

HP 70 · DMG 10 · SPD 16

Type to fight

Attack

*Pick an element, type up to **3 spell words** (10 s), then the **target's name** (5 s)*

Fizzle
The spell fails, turn lost

Weak cast
Base spell, minimum power

Good cast
Branch spell, medium power

Full cast
Chosen spell at max power

Misspell the target and the spell hits at random, even you.

Defence

*Time slows down and **2 words** appear. Their length and timer depend on the attack*

Hit
Take full damage

Dodge
No damage: stop or press Enter

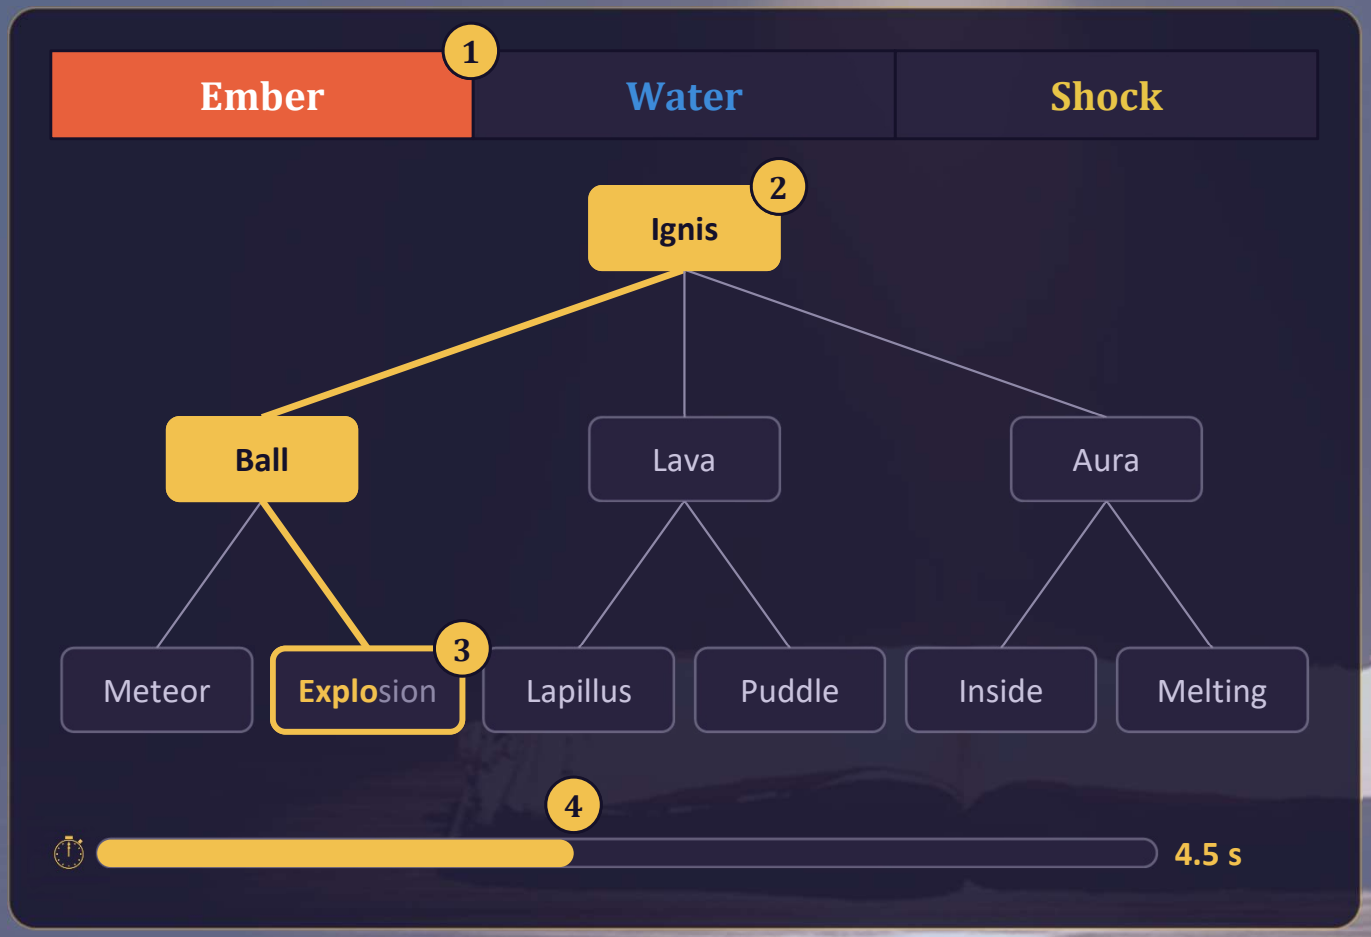

Failed parry
Take full damage

Parry
No damage + counterattack

*Going for the parry cancels the dodge: **risk vs reward**.*

Spellbook UI

1. Type an **element**'s name to open its page
2. A spell is **3 words** down one branch
3. Letters light up as you type. A finished word **locks the branch**
4. The **timer**: when it runs out, the last full word decides the spell

The Hub

The wizard's study: **type an object's name** to use it, type **START** to begin a run

G

Grimoire

Choose the **spells** you take on the run: one per element at first, more with upgrades.

P

Potion Belt

Pick the **potions** for the run. Starts with 3 slots, buy more to carry extra.

C

Crystal Stand

Spend **Shards** to unlock and upgrade spells and stats: health, speed, timers, word length.

A

Alchemy Lab

Spend **Ingredients** to boost potion power and duration, and the Trader's stock.

Spirit Letters

Run only. Spent at Altars and Traders, lost when the run ends.

Shards

Permanent. Unlock and upgrade spells and stats.

Potion Ingredients

Permanent. Make your potions stronger.

Game references

Click an image to watch its gameplay

The Typing of the Dead

Typing as the **core of combat**: every action is a word.

Clair Obscur: Expedition 33

Turn-based fights with **real-time dodge and parry**.

Slay the Spire

Branching map and rogue-lite run structure.

Shroom and Gloom

Art style and tone, and the design of its **creature enemies**.

Art reference

Stylised and colourful: readable silhouettes, warm light, chunky props

Early access

The full first stage, playable from the first fight to the boss

1 **Playable wizard**	**3** **Enemy types** 1 attack each	**3** **Bosses** rotating, 2 attacks each	**1** **Full stage**
30 **Spells** 10 per element	**3** **Potions**	**4** **Hub stations**	**9** **Arenas** 7 fight + boss + shop

More stages, enemies and spells come after early access.

How we build it

*One rule: **smart reuse** of assets, mechanics and UI*

Low poly art

Simple shapes with a **recognisable style**: quick to model, light to run, easy to recolour.

One rig for all

Every character shares the same proportions and a **Mixamo-compatible rig**, so animations are reused.

Recycled VFX

5–6 base effects, rescaled and recoloured, cover every spell and enemy attack.

Modular arenas

7–8 props rearranged in engine: the same style, a different room every fight.

Fixed map layouts

Hand-made maps where only the **encounter icons change**: no runtime generation, cleaner UI, easier balancing.

One input everywhere

Typing drives combat, shops, altar and hub, so a **single UI system** serves the whole game.

Beyond early access

The same systems, extended: every addition reuses what is already built

Early access

More stages

New areas with their own enemies and bosses.

More spells

New branches in the grimoire, and new status effects.

New wizards

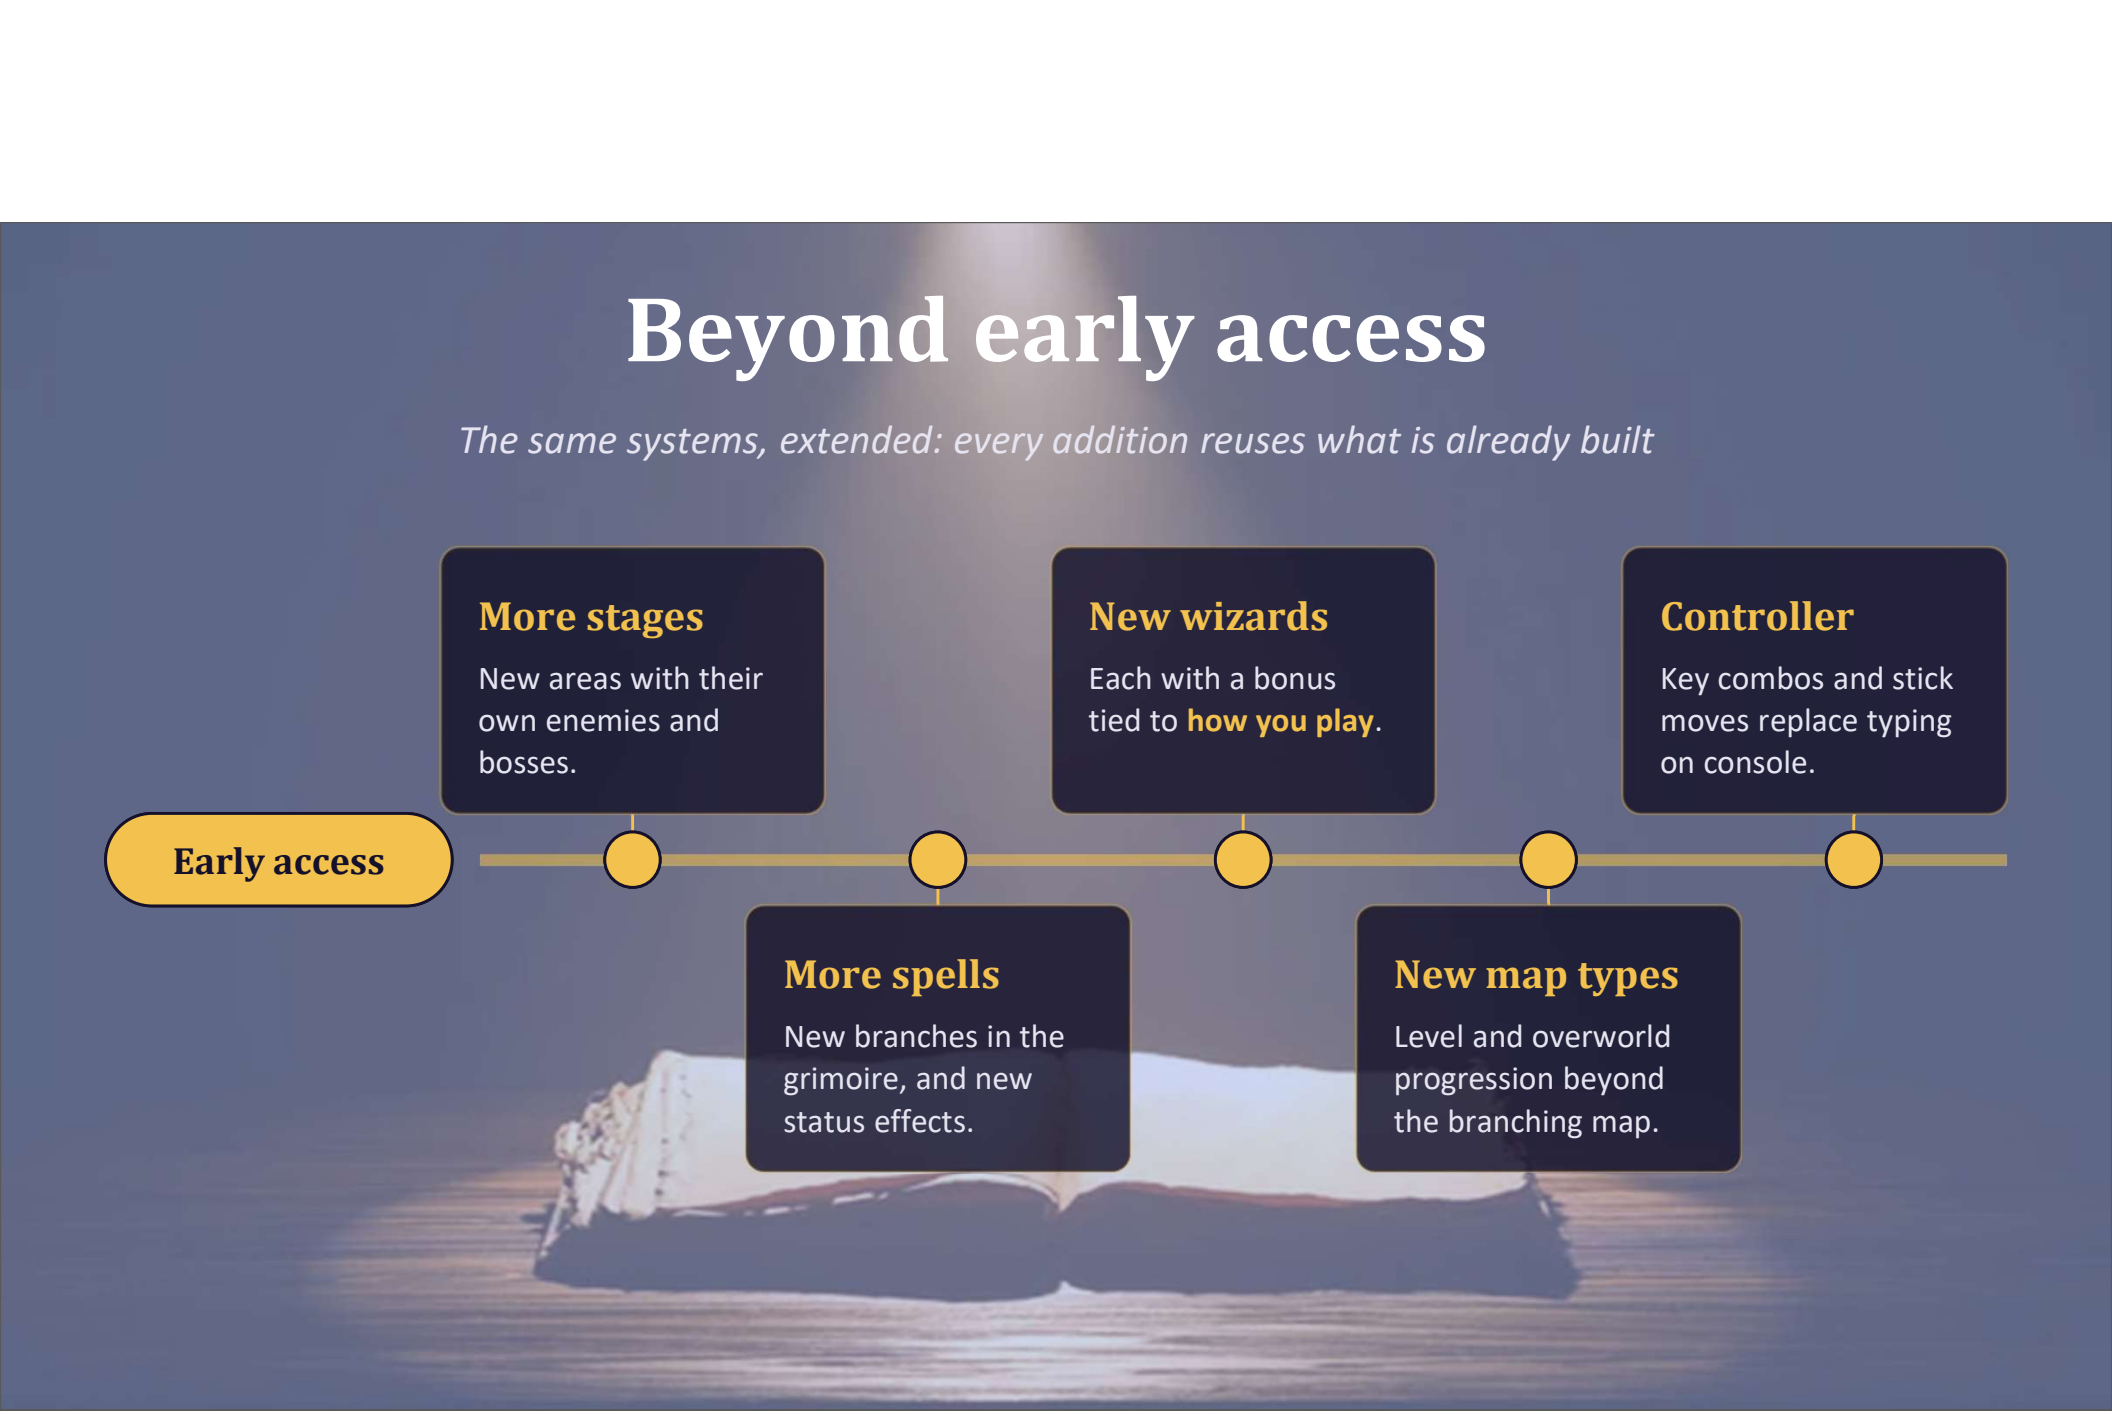

Each with a bonus tied to **how you play**.

New map types

Level and overworld progression beyond the branching map.

Controller

Key combos and stick moves replace typing on console.

Team

Four of us building it, one seat still open
