Sol Protocol: UI rework

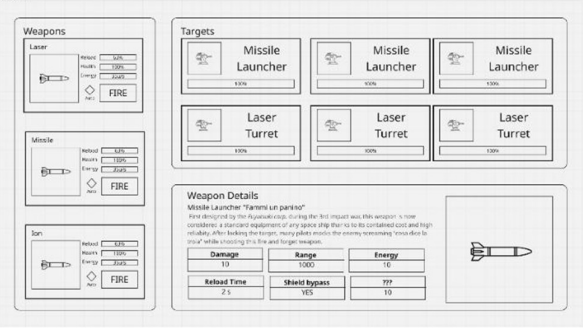

Implementation status: these reworks were presented to the team and approved. Due to time constraints, not all of them had been implemented when I left the project, and I don't know how the UI has changed since then. This is why some of these designs may not match what is currently in the game.

Contents

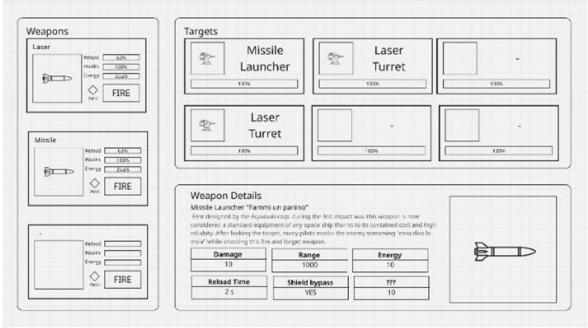

Original UIs (before the rework) 1
Rework of UIs already in game 2
UI Engineer Station 3
UI 3D Printer 6
UI Scouting Station 6
UI Inventory Extractor 7
Galactic Map 8
Lobby Menu 8

Original UIs (before the rework)

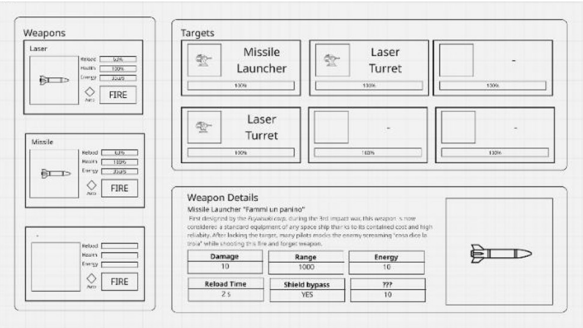

The four weapon panels on the board before the rework, for reference.

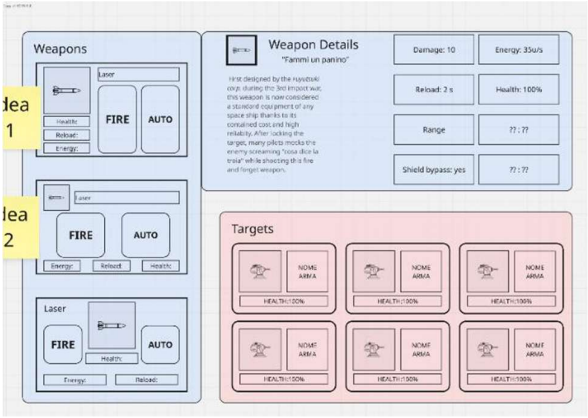

Weapon Panel 1: Original weapon panel: three weapons (Laser, Missile, Ion) with status and FIRE, six targets and details of the selected weapon.

Weapons Panel - 3 targets, 2 weapons: Variant with two weapons and three targets: empty slots stay visible.

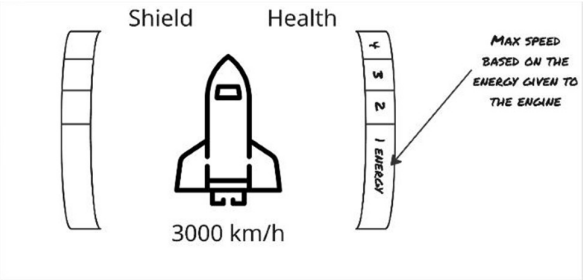

EDITABLE: Editable copy of the three targets / two weapons variant.

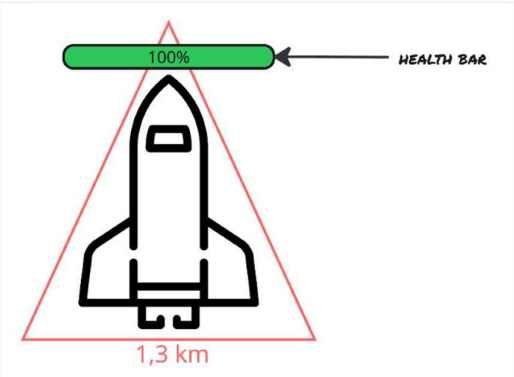

Copy of EDITABLE: First colored proposal: two layout ideas for the weapon slot (FIRE/AUTO) and targets with weapon name and health.

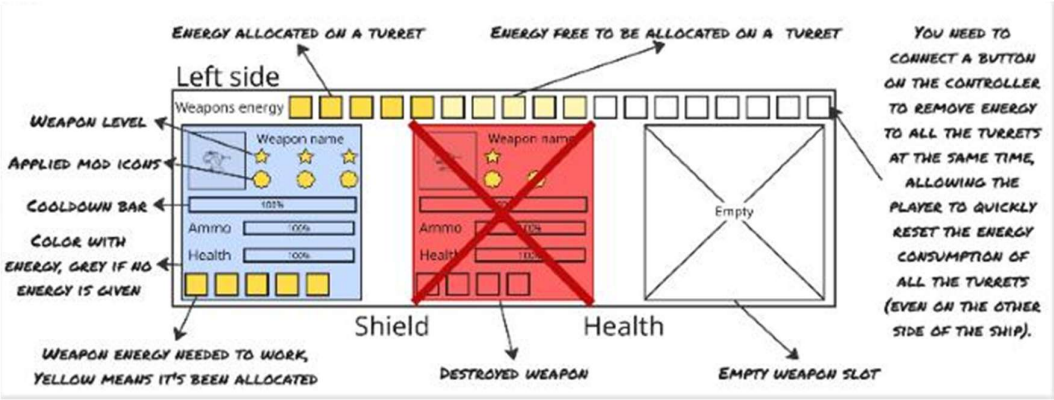

Rework of UIs already in game

Rework Pilot UI: Pilot HUD: shield and health on the sides of the ship, 4-level engine energy bar that sets the max speed.

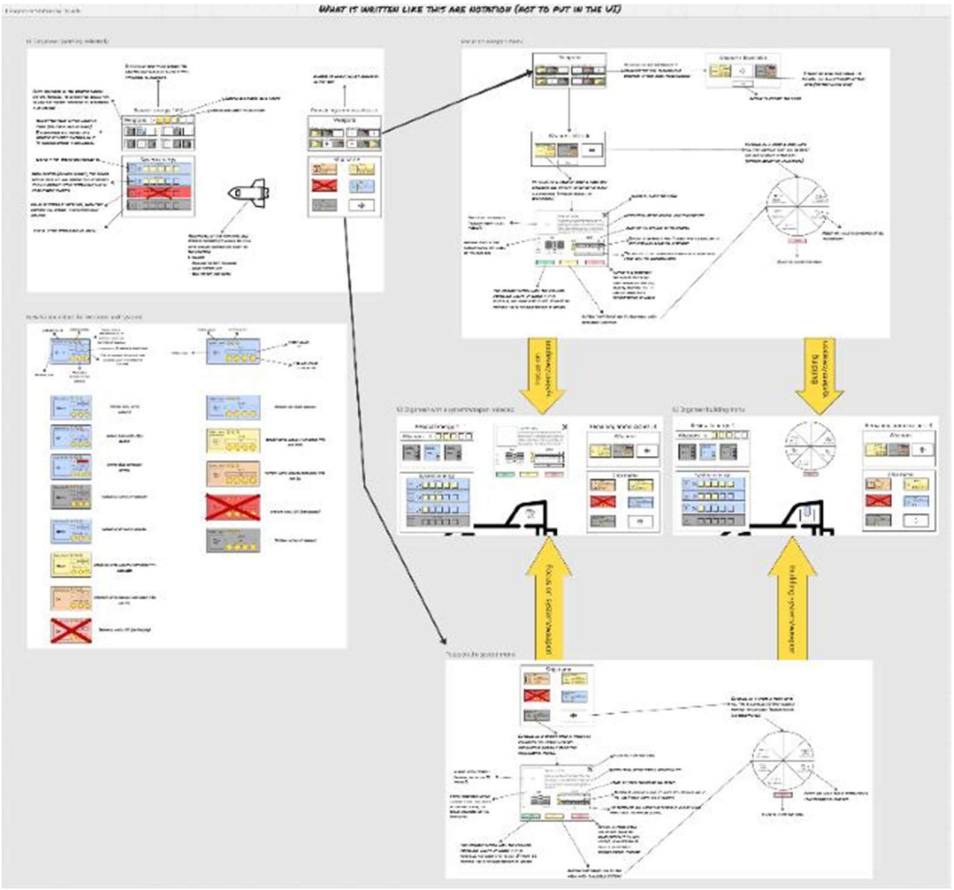

Rework Enemy UI: Enemy marker: red triangle with health bar above and distance below.

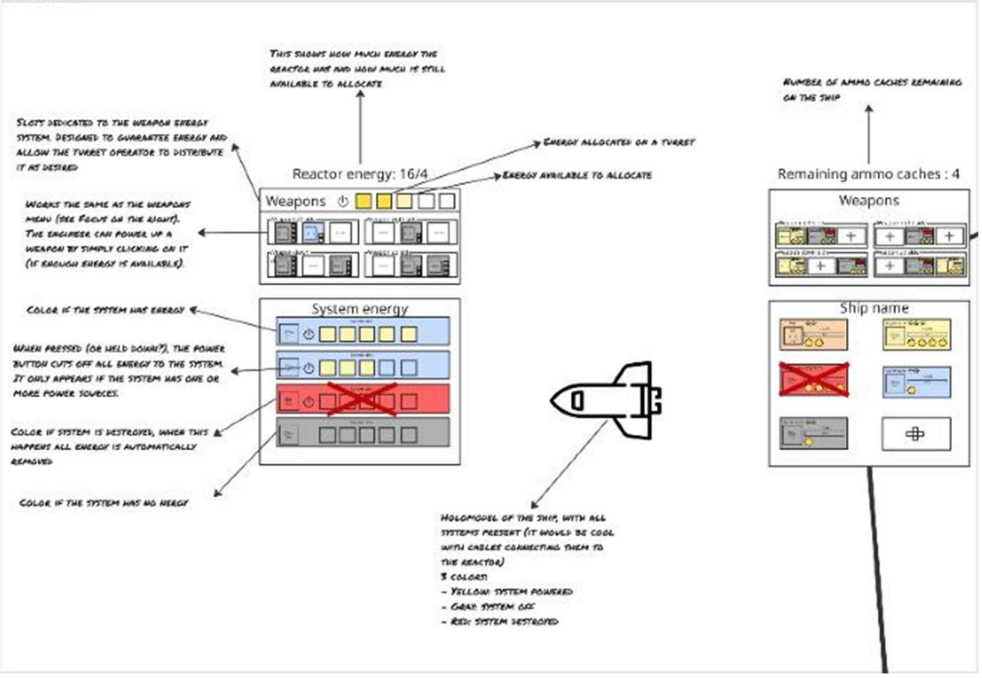

Rework Turret UI: Turret panel for each side of the ship: allocated energy, level, mods, cooldown, ammo and health; destroyed weapon crossed out, empty slot.

UI Engineer Station

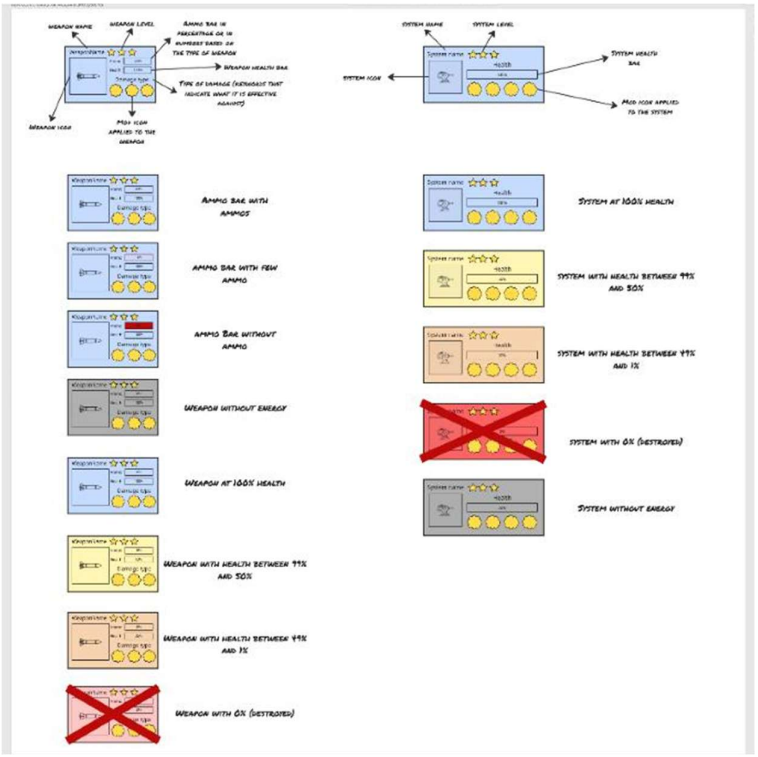

Rework of the engineer station, replacing the original weapon panels.

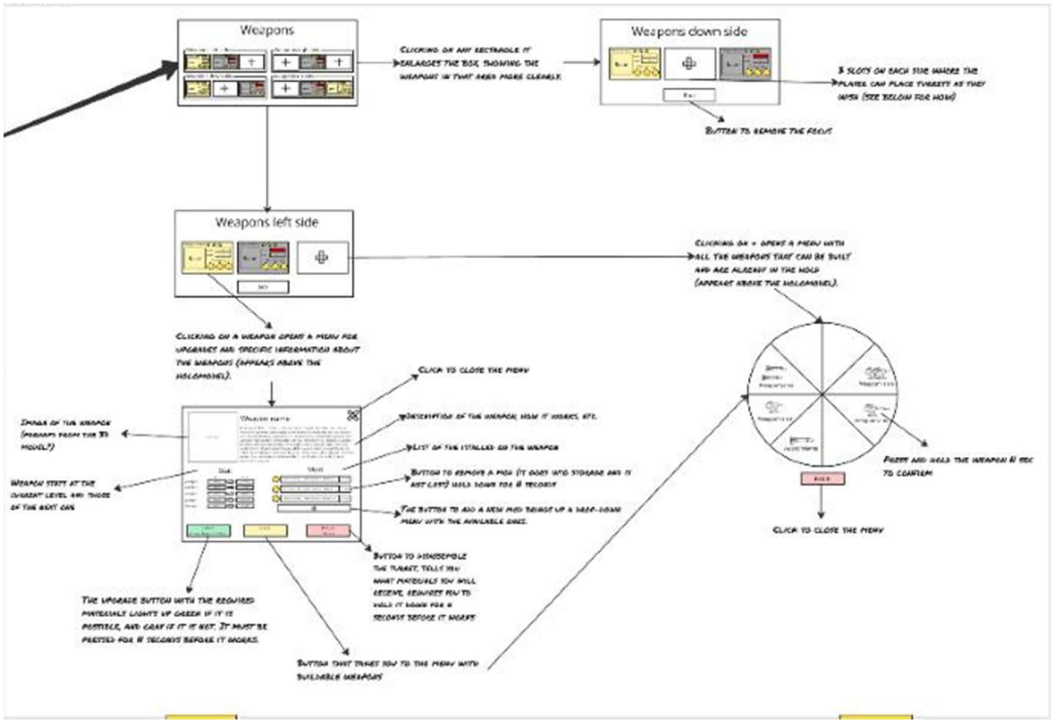

Overview: Full flow: base screen, focus on a weapon or system, and building menu.

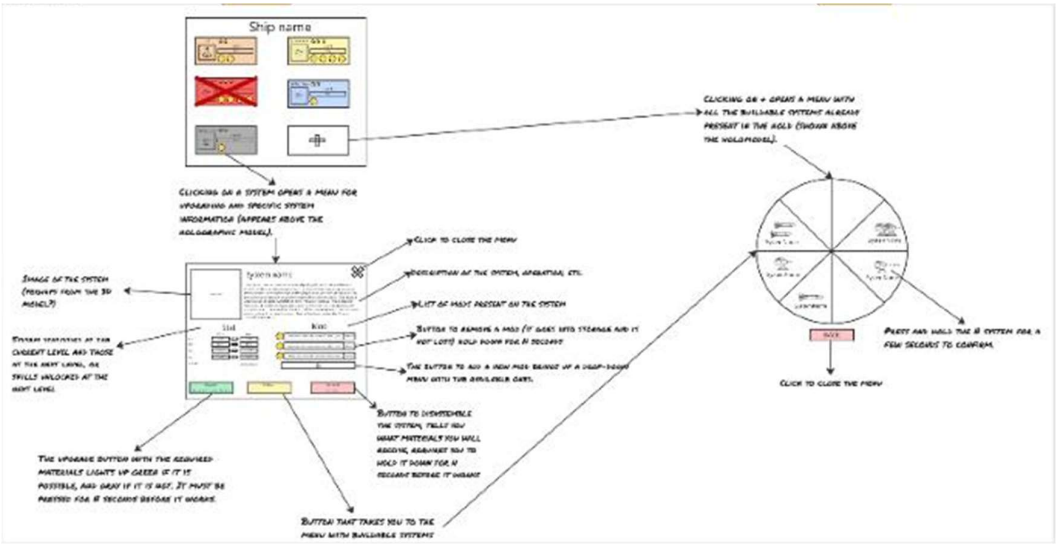

Nothing selected: Base screen: reactor energy to split between weapons and systems, ship hologram in the middle, remaining ammo caches.

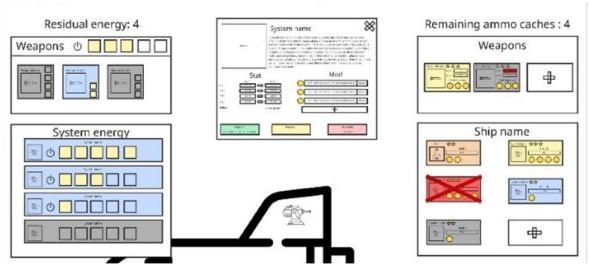

New UI and colors: Legend of weapon and system cards: color by health (blue, yellow, orange, red crossed out), grey when unpowered.

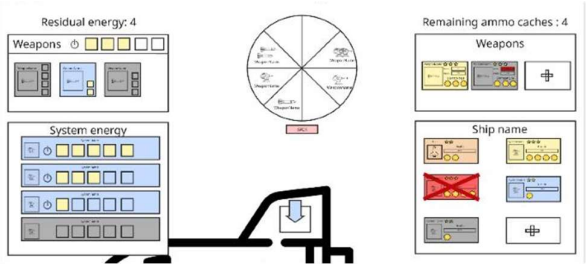

Focus on weapon menu: Click a side to see its slots, click a weapon for details, upgrade, mods and disassembly; "+" opens the radial building menu.

Focus on system menu: Same logic for systems: details with stats, mods, upgrade and disassembly; "+" to build.

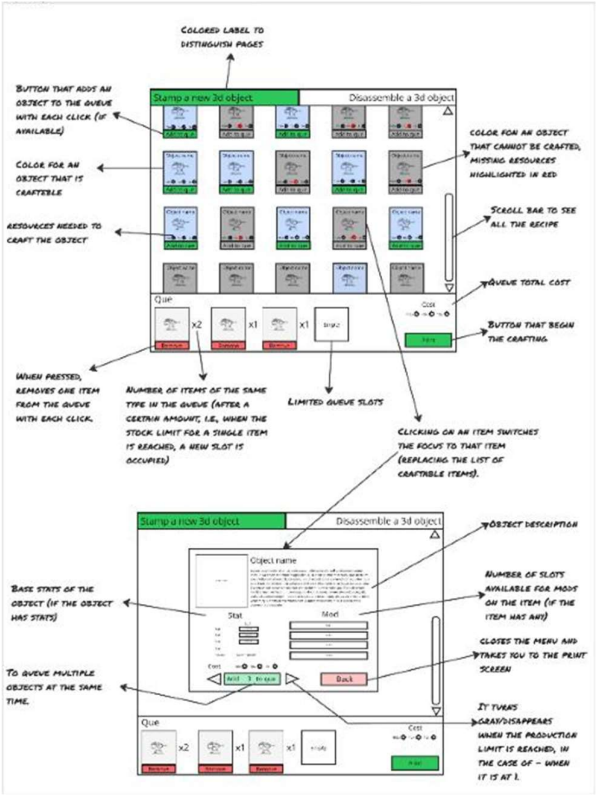

System/weapon selected: The detail panel appears above the ship hologram.

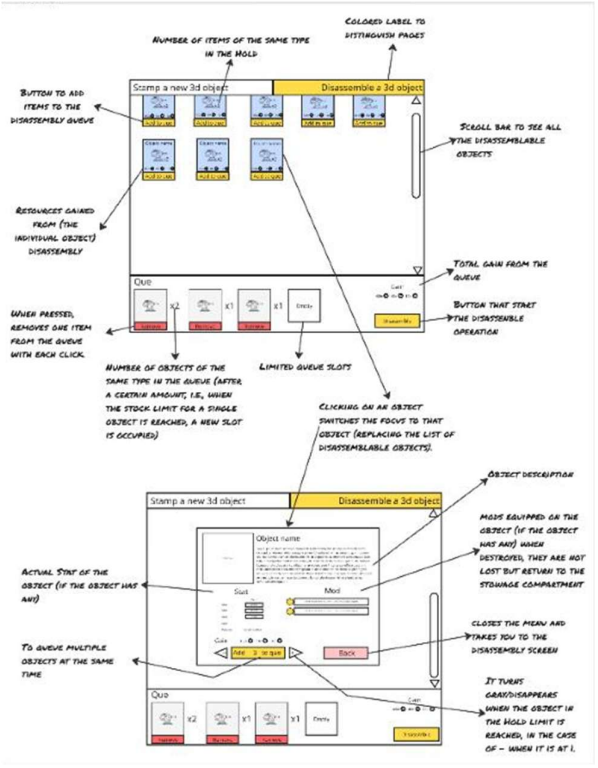

Building menu: The radial menu with buildable weapons appears above the hologram.

UI 3D Printer

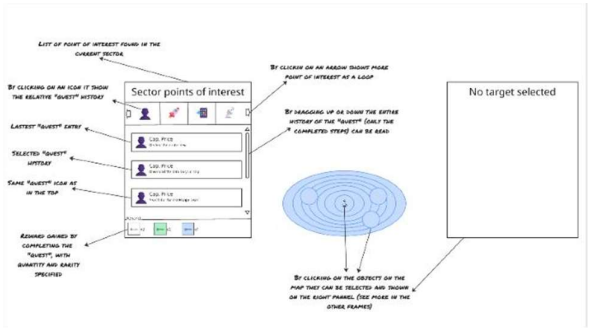

Print an object: Grid of printable objects (grey if resources are missing) and a queue with total cost; click an object for details and quantity.

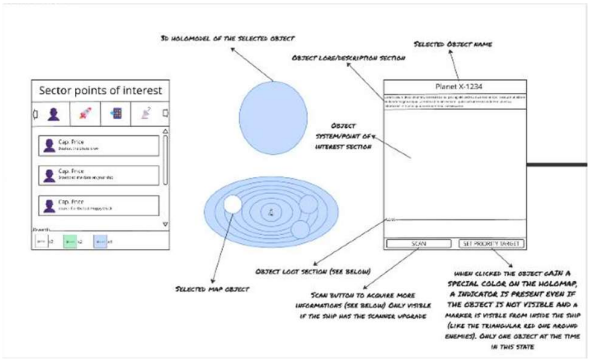

Disassemble an object: Hold items to disassemble, resources gained and queue; equipped mods go back to storage.

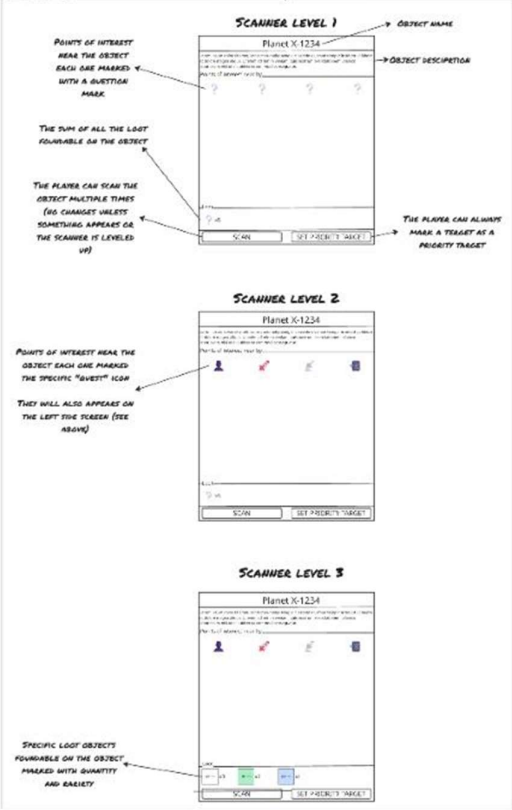

UI Scouting Station

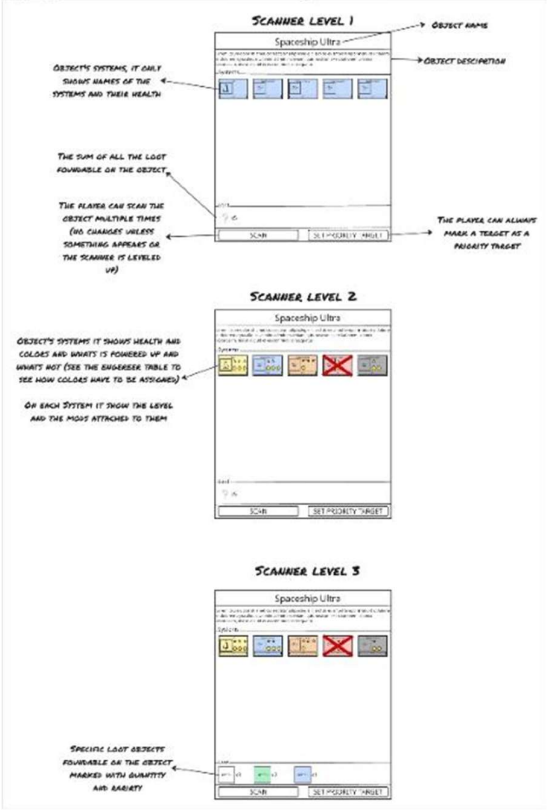

Scanner, no target: Sector points of interest with "quest" history and holographic map of the system.

Scanner, target selected: 3D model, description and loot of the object, with SCAN and SET PRIORITY TARGET buttons.

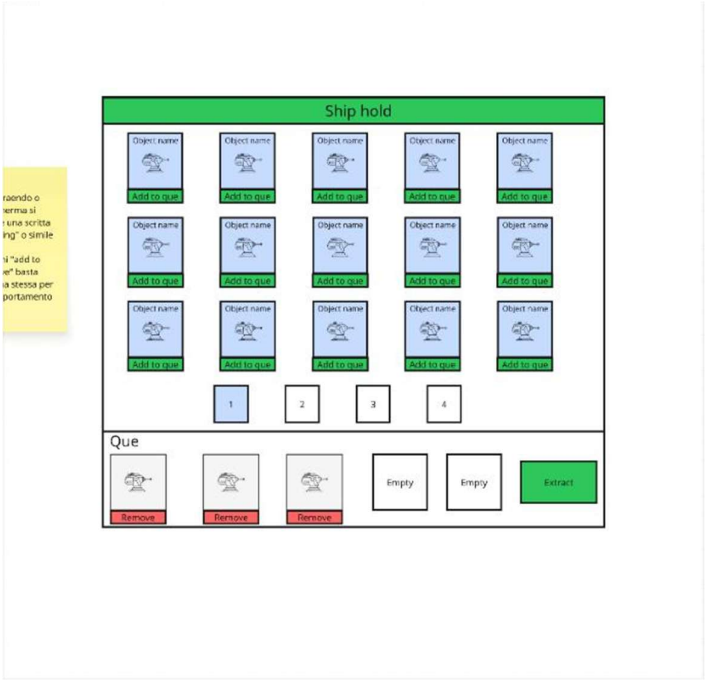

Scanning a non-hostile object: The three scanner levels: from unknown points of interest to detailed loot.

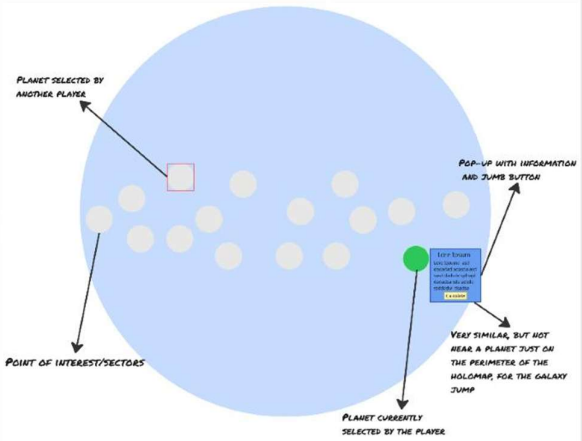

Scanning a hostile object: Higher levels reveal the enemy ship's systems, health, energy, mods and loot.

UI Inventory Extractor

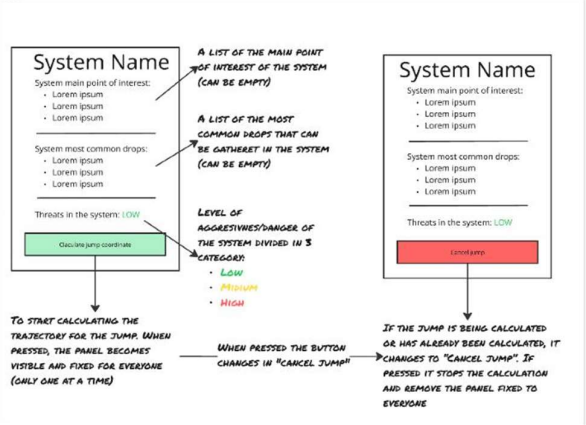

Inventory Extractor: Ship hold split into pages and a queue of items to extract.

Galactic Map

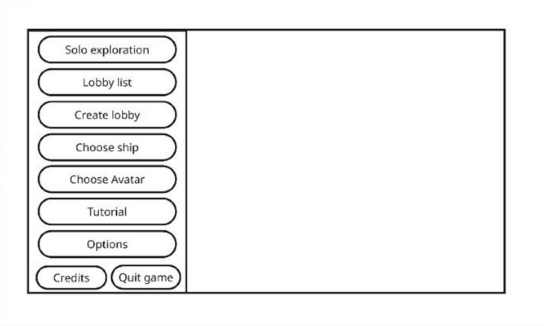

General view: Sectors and planets; the player's selected planet is green, another player's is highlighted.

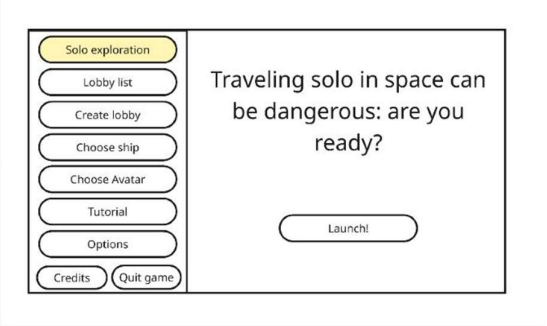

Pop-up panel: Points of interest, common drops and threat level; "Calculate jump" turns into "Cancel jump".

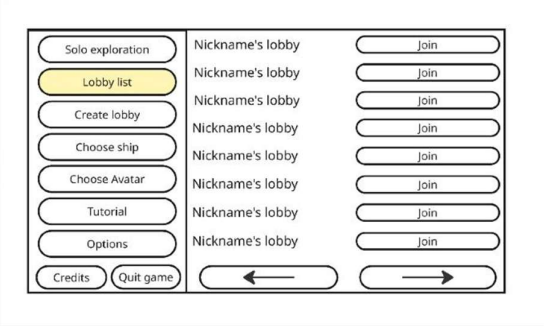

Lobby Menu

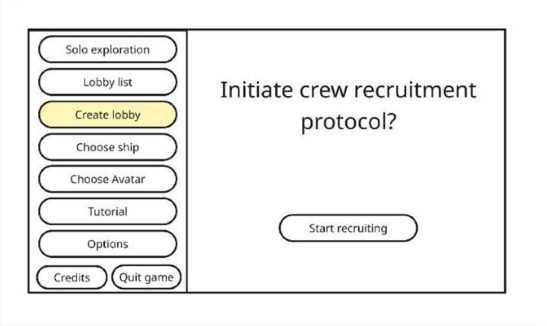

Base menu: Menu entries on the left, content on the right.

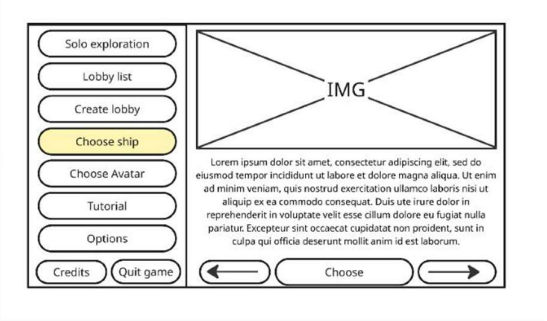

Solo Exploration: Solo run with a Launch button.

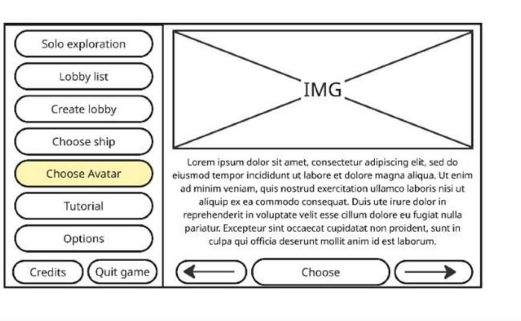

Lobby list: Open lobbies with Join and page arrows.

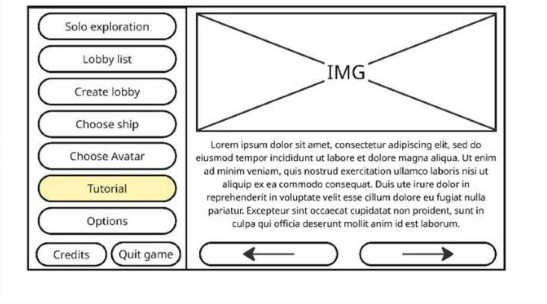

Create lobby: Create a lobby with "Start recruiting".

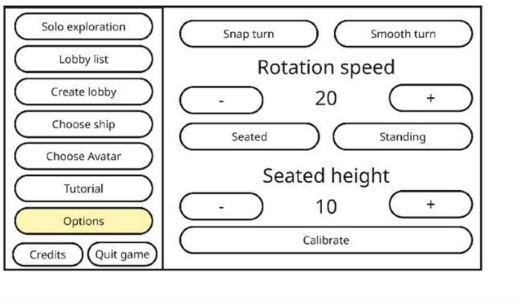

Choose ship: Ship picture, description and arrows to browse.

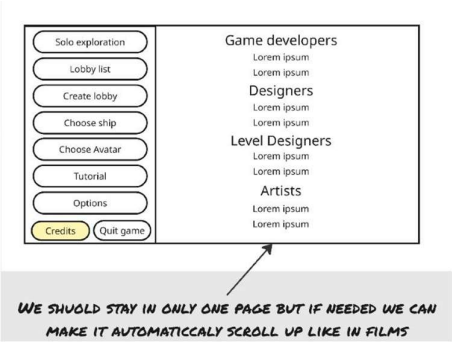

Choose avatar: Same layout as ship selection.

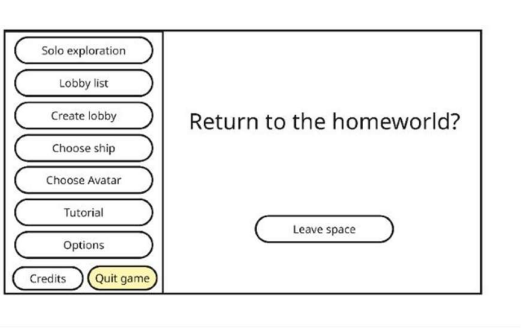

Tutorial: Paged tutorial with picture and text.

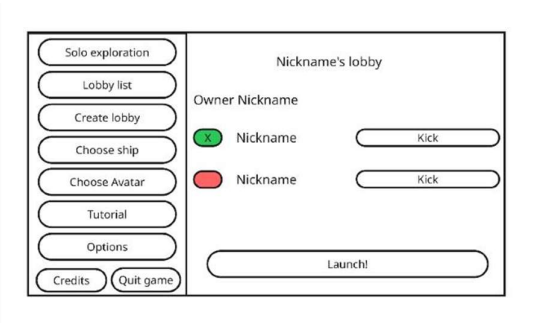

Options: VR options: snap/smooth turn, rotation speed, seated/standing, seated height, calibration.

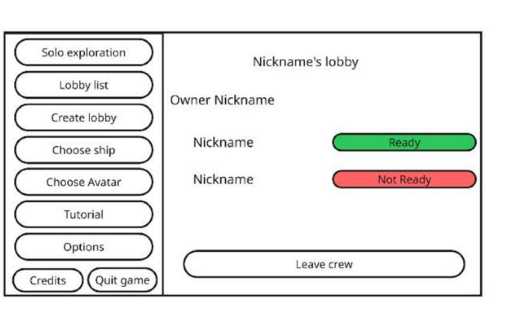

Credits: Credits by role; auto-scroll like in films if one page is not enough.

Quit game: Exit confirmation with "Leave space".

Owner view: Members with ready status, Kick and Launch buttons.

Member view: Players' Ready/Not Ready status and Leave crew button.
